Contents

1 Introduction **1**

1.1 About . . . 1

1.2 System requirements . . . 1

1.2.1 For rebuilding library . . . 1

1.2.2 For using library . . . 2

2 How to rebuild library **3**

2.1 Building on generic UNIX . . . 3

2.2 Building on debian-based linux systems . . . 3

2.3 Building on redhat-based linux systems . . . 3

2.4 Building on FreeBSD . . . 4

2.5 Buliding on Mac OS X . . . 4

2.6 Buliding on Windows . . . 4

2.7 Source code access . . . 4

3 How to use with... **5**

3.1 Usage with C . . . 5

3.1.1 Visual C++ . . . 5

3.1.2 MinGW . . . 5

3.1.3 C++ Builder . . . 5

3.1.4 XCode . . . 6

3.1.5 GCC . . . 6

3.2 .NET . . . 6

3.3 Delphi . . . 6

3.4 MATLAB . . . 6

4 Data Structure Documentation **7**

4.1 accessories_settings_t Struct Reference . . . 7

4.1.1 Detailed Description . . . 7

4.1.2 Field Documentation . . . 8

4.1.2.1 MBRatedCurrent . . . 8

4.1.2.2 MBRatedVoltage . . . 8

4.1.2.3 MBTorque . . . 8
4.1.2.4 TSGrad . . . 8
4.2 add_sync_in_action_calb_t Struct Reference . . . 8
4.3 add_sync_in_action_t Struct Reference . . . 8
4.3.1 Detailed Description . . . 9
4.3.2 Field Documentation . . . 9
4.3.2.1 Speed . . . 9
4.3.2.2 uPosition . . . 9
4.3.2.3 uSpeed . . . 9
4.4 analog_data_t Struct Reference . . . 9
4.4.1 Detailed Description . . . 10
4.5 brake_settings_t Struct Reference . . . 11
4.5.1 Detailed Description . . . 11
4.5.2 Field Documentation . . . 11
4.5.2.1 t1 . . . 11
4.5.2.2 t2 . . . 11
4.5.2.3 t3 . . . 11
4.5.2.4 t4 . . . 11
4.6 calibration_t Struct Reference . . . 12
4.6.1 Detailed Description . . . 12
4.7 chart_data_t Struct Reference . . . 12
4.7.1 Detailed Description . . . 12
4.8 control_settings_calb_t Struct Reference . . . 13
4.8.1 Field Documentation . . . 13
4.8.1.1 MaxClickTime . . . 13
4.8.1.2 Timeout . . . 13
4.9 control_settings_t Struct Reference . . . 13
4.9.1 Detailed Description . . . 14
4.9.2 Field Documentation . . . 14
4.9.2.1 MaxClickTime . . . 14
4.9.2.2 MaxSpeed . . . 14
4.9.2.3 Timeout . . . 14
4.9.2.4 uDeltaPosition . . . 14
4.9.2.5 uMaxSpeed . . . 14
4.10 controller_name_t Struct Reference . . . 14
4.10.1 Detailed Description . . . 15
4.10.2 Field Documentation . . . 15
4.10.2.1 ControllerName . . . 15
4.11 ctp_settings_t Struct Reference . . . 15
4.11.1 Detailed Description . . . 15

4.11.2 Field Documentation . . . 16
4.11.2.1 CTPMinError . . . 16
4.12 debug_read_t Struct Reference . . . 16
4.12.1 Detailed Description . . . 16
4.13 device_information_t Struct Reference . . . 16
4.13.1 Detailed Description . . . 16
4.14 edges_settings_calb_t Struct Reference . . . 17
4.15 edges_settings_t Struct Reference . . . 17
4.15.1 Detailed Description . . . 17
4.15.2 Field Documentation . . . 17
4.15.2.1 LeftBorder . . . 17
4.15.2.2 RightBorder . . . 18
4.15.2.3 uLeftBorder . . . 18
4.15.2.4 uRightBorder . . . 18
4.16 encoder_information_t Struct Reference . . . 18
4.16.1 Detailed Description . . . 18
4.16.2 Field Documentation . . . 18
4.16.2.1 Manufacturer . . . 18
4.16.2.2 PartNumber . . . 18
4.17 encoder_settings_t Struct Reference . . . 19
4.17.1 Detailed Description . . . 19
4.17.2 Field Documentation . . . 19
4.17.2.1 MaxCurrentConsumption . . . 19

Chapter 1

Introduction

1.1 About

Congratulations on choosing XIMC multi-platform programming library! This document contains all information about XIMC library. It utilizes well known virtual COM-port interface, so you can use it on Windows 7, Windows Vista, Windows XP, Windows Server 2003, Windows 2000, Linux, Mac OS X. XIMC multi-platform programing library supports plug/unplug on the fly. One program can control one device. Multiple processes (programs) that control one device simultaneously are not allowed.

1.2 System requirements

1.2.1 For rebuilding library

On Windows:

- Windows 2000 or later, 64-bit system (if compiling both arhitectures) or 32-bit system.
- Microsoft Visual C++ 2008 or later
- cygwin with tar, bison, flex installed

On Linux or FreeBSD:

- 64-bit or/and 32-bit system system
- gcc 4 or later
- common autotools: autoconf, autoheader, aclocal, automake, autoreconf, libtool
- gmake
- doxygen - for building docs
- LaTeX distribution (teTeX or texlive) - for building docs
- flex 2.5.30+
- bison
- mercurial (for building developer version from hg)

On Mac OS X:

- XCode 4

- doxygen
- mactex
- autotools
- mercurial (for building developer version from hg)

If mercurial is used, please enable 'purge' extension by adding to ∼/.hgrc following lines:

```
[extensions]
  hgext.purge=
```

1.2.2 For using library

Supported operating systems (32 or 64 bit):

- Mac OS X 10.6
- Windows 2000 or later
- Autotools-compatible unix. Package is installed from sources.
- Linux debian-based. DEB package is built against Debian Squeeze 6
- Linux rpm-based. RPM is built against OpenSUSE 10
- FreeBSD 9. Package is provided.

Build requirements:

- Windows: Microsoft Visual C++ 2008 or mingw (currently not supported)
- UNIX: gcc 4, gmake
- Mac OS X: XCode 4

Chapter 2

How to rebuild library

2.1 Building on generic UNIX

Generic version could be built with standard autotools.

```
./build.sh lib
```

Built files (library, headers, documentation) are installed to ./dist/local directory. It is a generic developer build. Sometimes you need to specify additional parameters to command line for your machine. Please look to following OS sections.

2.2 Building on debian-based linux systems

Requirement: 64-bit and 32-bit debian system, ubuntu Typical set of packages: gcc, autotools, autoconf, libtool, dpkg-dev, flex, bison, doxygen, texlive, mercurial

It's required to match library and host architecture: 64-bit library can be built only at 64-bit host, 32-bit library - only at 32-bit host.

To build library and package Invoke a script:

```
$ ./build.sh libdeb
```

Grab packages from ./dist/latest/deb and locally installed binaries from ./dist/local.

2.3 Building on redhat-based linux systems

Requirement: 64-bit redhat-based system (Fedora, Red Hat, SUSE) Typical set of packages: gcc, autotools, autoconf, libtool, flex, bison, doxygen, texlive, mercurial

It's possible to build both 32- and 64-bit libraries on 64-bit host system. 64-bit library can't be built on 32-bit system.

To build library and package invoke a script:

```
$ ./build.sh librpm
```

Grab packages from ./dist/latest/rpm and locally installed binaries from ./dist/local.

2.4 Building on FreeBSD

Requirement: 64-bit or 32-bit FreeBSD Typical set of packages: gcc, autotools, autoconf, libtool, flex, bison, doxygen, teTeX, mercurial

It's required to match library and host architecture. Also you need to fix a configure.ac to exclude SOVER from the package name (freebsd does not use linux conventions on library versioning).

Attention! It's needed to specify additional parameters for a simple build.

```
$ ./build.sh lib LEX=/usr/local/bin/flex CXXFLAGS=-I/usr/local/include/flex
```

To build a library and package invoke following command. It requires sudo privileges for port installing and specially crafted /usr/ports/local tree. Consult a script for details.

```
$ ./build.sh libfreebsd
```

Grab packages from ./dist/latest/freebsd.

2.5 Buliding on Mac OS X

To build and package a script invoke a script:

```
$ ./build.sh libosx
```

Built library (classical and framework), examples (classical and .app), documentation are located at ./dist/latest/macosx, locally installed binaries from ./dist/local.

2.6 Buliding on Windows

Requirements: 64-bit windows (build script builds both architectures), cygwin (must be installed to a default path), mercurial.

Invoke a script:

```
$ ./build.bat
```

Grab packages from ./dist/latest/win32 and ./dist/latest/win64

2.7 Source code access

XIMC source codes are given under special request.

Chapter 3

How to use with...

Library usage can be examinated from test application testapp. Non-C languages are supported because library supports stdcall calling convention and so can be used with a variety of languages.

C test project is located at 'examples/testapp' directory, C# test project - at 'examples/testcs', VB.NET - 'examples/testvbnet', Delphi 6 - 'examples/testdelphi', sample bindings for MATLAB - 'examples/testmatlab'

3.1 Usage with C

3.1.1 Visual C++

Testapp can be built using testapp.sln. Library must be compiled with MS Visual C++ too, mingw-library isn't supported. Make sure that Microsoft Visual C++ Redistributable Package is installed.

NOTE: Example compiled with(MS Visual C++ 2008 SP1 and needs package 9.0.307291 (provided with SDK - vcredist_x86 or vcredist_x64)

Open solution examples/testapp/testapp.sln, build and run from the IDE.

3.1.2 MinGW

MinGW is a port of GCC to win32 platform. It's required to install MinGW package. Currently not supported

MinGW-compiled testapp can be built with MS Visual C++ or mingw library.

```
$ mingw32-make -f Makefile.mingw all
```

Then copy library libximc.dll to current directory and launch testapp.exe.

3.1.3 C++ Builder

First of all you should create C++ Builder-style import library. Visual C++ library is not compatible with BCB. Invoke:

```
$ implib libximc.lib libximc.def
```

Then compile test application:

```
$ bcc32 -I..\..\ximc\win32 -L..\..\ximc\win32 -DWIN32 -DNDEBUG -D_WINDOWS
     testapp.c libximc.lib
```

3.1.4 XCode

Test app should be built with XCode project testapp.xcodeproj. Library is a Mac OS X framework, and at example application it's bundled inside testapp.app

Then launch application testapp.app and check activity output in Console.app.

3.1.5 GCC

Make sure that libximc (rpm, deb, freebsd package or tarball) is installed at your system. Installation of package should be performed with a package manager of operating system. On OS X plain dylib library and a framework is provided.

Note that user should belong to system group which allows access to a serial port (dip or serial, for example).

Test application can be built with the installed library with the following script:

```
$ make
```

In case of cross-compilation (target architecture differs from the current system architecture) feed -m64 or -m32 flag to compiler. On OS X it's needed to use -arch flag instead to build an universal binary. Please consult a compiler documentation.

Then launch the application as:

```
$ make run
```

Note: make run on OS X copies a library to the current directory. If you want to use library from the custom directory please be sure to specify LD_LIBRARY_PATH or DYLD_LIBRARY_PATH to the directory with the library.

3.2 .NET

Wrapper assembly for libximc.dll is wrappers/csharp/ximcnet.dll. It is provided with two different architectures and depends on .NET 2.0.

Test .NET applications for Visual Studio 2008 is located at testcs (for C#) and testvbnet (for VB.NET) respectively. Open solutions, build and run.

3.3 Delphi

Wrapper for libximc.dll is a unit wrappers/delphi/ximc.pas

Console test application for is located at testdelphi. Tested with Delphi 6 and only 32-bit version.

Just compile, place DLL near the executable and run program.

3.4 MATLAB

Sample MATLAB program testximc.m is provided at the directory examples/testmatlab. Fix first lines with the actual location of the XIMC library and launch M-file as:

```
$ testximc
```

Chapter 4

Data Structure Documentation

4.1 accessories_settings_t Struct Reference

Additional accessories information.

Data Fields

- char MagneticBrakeInfo [25]

  The manufacturer and the part number of magnetic brake, the maximum string length is 24 characters.
- float MBRatedVoltage

  Rated voltage for controlling the magnetic brake (B).
- float MBRatedCurrent

  Rated current for controlling the magnetic brake (A).
- float MBTorque

  Retention moment (mN m).
- unsigned int MBSettings

  Magnetic brake settings flags.
- char TemperatureSensorInfo [25]

  The manufacturer and the part number of the temperature sensor, the maximum string length: 24 characters.
- float TSMin

  The minimum measured temperature (degrees Celsius) Data type: float.
- float TSMax

  The maximum measured temperature (degrees Celsius) Data type: float.
- float TSGrad

  The temperature gradient (V/degrees Celsius).
- unsigned int TSSettings

  Temperature sensor settings flags.
- unsigned int LimitSwitchesSettings

  Temperature sensor settings flags.

4.1.1 Detailed Description

Additional accessories information.

See also

set_accessories_settings
get_accessories_settings
get_accessories_settings, set_accessories_settings

4.1.2 Field Documentation

4.1.2.1 float MBRatedCurrent

Rated current for controlling the magnetic brake (A).

Data type: float.

4.1.2.2 float MBRatedVoltage

Rated voltage for controlling the magnetic brake (B).

Data type: float.

4.1.2.3 float MBTorque

Retention moment (mN m).

Data type: float.

4.1.2.4 float TSGrad

The temperature gradient (V/degrees Celsius).

Data type: float.

4.2 add_sync_in_action_calb_t Struct Reference

Data Fields

- float Position
  Desired position or shift.
- float Speed
  Target speed.

4.3 add_sync_in_action_t Struct Reference

This command adds one element of the FIFO commands.

Data Fields

- int Position
  Desired position or shift (whole steps)
- int uPosition
  The fractional part of a position or shift in microsteps (-255 .
- unsigned int Speed
  Target speed(for stepper motor: steps / c, for DC: rpm).
- unsigned int uSpeed
  Target speed in microsteps/s.

4.3.1 Detailed Description

This command adds one element of the FIFO commands.

See also

set_add_sync_in_action

4.3.2 Field Documentation

4.3.2.1 unsigned int Speed

Target speed(for stepper motor: steps / c, for DC: rpm).

Range: 0..1000000.

4.3.2.2 int uPosition

The fractional part of a position or shift in microsteps (-255 .

. 255)(is only used with stepper motor)

4.3.2.3 unsigned int uSpeed

Target speed in microsteps/s.

Using with stepper motor only. Range: 0..255.

4.4 analog_data_t Struct Reference

Analog data.

Data Fields

- unsigned int A1Voltage_ADC
  "Voltage on pin 1 winding A" raw data from ADC.
- unsigned int A2Voltage_ADC
  "Voltage on pin 2 winding A" raw data from ADC.
- unsigned int B1Voltage_ADC
  "Voltage on pin 1 winding B" raw data from ADC.
- unsigned int B2Voltage_ADC
  "Voltage on pin 2 winding B" raw data from ADC.
- unsigned int SupVoltage_ADC
  "Voltage on the top of MOSFET full bridge" raw data from ADC.
- unsigned int ACurrent_ADC
  "Winding A current" raw data from ADC.
- unsigned int BCurrent_ADC
  "Winding B current" raw data from ADC.
- unsigned int FullCurrent_ADC
  "Full current" raw data from ADC.
- unsigned int Temp_ADC
  Voltage from temperature sensor, raw data from ADC.

- unsigned int Joy_ADC

  Joystick raw data from ADC.
- unsigned int Pot_ADC

  Voltage on "Potentiometer", raw data from ADC.
- unsigned int L5_ADC

  USB supply voltage after the current sense resistor, from ADC.
- unsigned int H5_ADC

  Power supply USB from ADC.
- int A1Voltage

  "Voltage on pin 1 winding A" calibrated data.
- int A2Voltage

  "Voltage on pin 2 winding A" calibrated data.
- int B1Voltage

  "Voltage on pin 1 winding B" calibrated data.
- int B2Voltage

  "Voltage on pin 2 winding B" calibrated data.
- int SupVoltage

  "Voltage on the top of MOSFET full bridge" calibrated data.
- int ACurrent

  "Winding A current" calibrated data.
- int BCurrent

  "Winding B current" calibrated data.
- int FullCurrent

  "Full current" calibrated data.
- int Temp

  Temperature, calibrated data.
- int Joy

  Joystick, calibrated data.
- int Pot

  Potentiometer, calibrated data.
- int L5

  USB supply voltage after the current sense resistor.
- int H5

  Power supply USB.
- unsigned int **deprecated**
- int R

  Motor winding resistance in mOhms(is only used with stepper motor).
- int L

  Motor winding pseudo inductance in uHn(is only used with stepper motor).

4.4.1 Detailed Description

Analog data.

This structure contains raw analog data from ADC embedded on board. These data used for device testing and deep recalibraton by manufacturer only.

See also

get_analog_data
get_analog_data

4.5 brake_settings_t Struct Reference

Brake settings.

Data Fields

- unsigned int t1

  Time in ms between turn on motor power and turn off brake.
- unsigned int t2

  Time in ms between turn off brake and moving readiness.
- unsigned int t3

  Time in ms between motor stop and turn on brake.
- unsigned int t4

  Time in ms between turn on brake and turn off motor power.
- unsigned int BrakeFlags

  Brake settings flags.

4.5.1 Detailed Description

Brake settings.

This structure contains parameters of brake control.

See also

set_brake_settings
get_brake_settings
get_brake_settings, set_brake_settings

4.5.2 Field Documentation

4.5.2.1 unsigned int t1

Time in ms between turn on motor power and turn off brake.

Range: 0..65535.

4.5.2.2 unsigned int t2

Time in ms between turn off brake and moving readiness.

All moving commands will execute after this interval. Range: 0..65535.

4.5.2.3 unsigned int t3

Time in ms between motor stop and turn on brake.

Range: 0..65535.

4.5.2.4 unsigned int t4

Time in ms between turn on brake and turn off motor power.

Range: 0..65535.

4.6 calibration_t Struct Reference

Calibration companion structure TODO docme.

Data Fields

- double A
  Mulitiplier.
- unsigned int MicrostepMode
  Microstep mode.

4.6.1 Detailed Description

Calibration companion structure TODO docme.

4.7 chart_data_t Struct Reference

Additional device state.

Data Fields

- int WindingVoltageA
  In the case step motor, the voltage across the winding A; in the case of a brushless, the voltage on the first coil, in the case of the only DC.
- int WindingVoltageB
  In the case step motor, the voltage across the winding B; in case of a brushless, the voltage on the second winding, and in the case of DC is not used.
- int WindingVoltageC
  In the case of a brushless, the voltage on the third winding, in the case step motor and DC is not used.
- int WindingCurrentA
  In the case step motor, the current in the coil A; brushless if the current in the first coil, and in the case of a single DC.
- int WindingCurrentB
  In the case step motor, the current in the coil B; brushless if the current in the second coil, and in the case of DC is not used.
- int WindingCurrentC
  In the case of a brushless, the current in the third winding, in the case step motor and DC is not used.
- unsigned int Pot
  Potentiometer in ten-thousandths of [0, 10000].
- unsigned int Joy
  The joystick to the ten-thousandths [0, 10000].
- int DutyCycle
  Duty cycle of PWM.

4.7.1 Detailed Description

Additional device state.

This structure contains additional values such as winding's voltages, currents and temperature.

See also

get_chart_data
get_chart_data

4.8 control_settings_calb_t Struct Reference

Data Fields

- float MaxSpeed [10]

  Array of speeds using with joystick and button control.
- unsigned int Timeout [9]

  timeout[i] is time in ms, after that max_speed[i+1] is applying.
- unsigned int MaxClickTime

  Maximum click time.
- unsigned int Flags

  Control flags.
- float DeltaPosition

  Shift (delta) of position.

4.8.1 Field Documentation

4.8.1.1 unsigned int MaxClickTime

Maximum click time.

Prior to the expiration of this time the first speed isn't enabled.

4.8.1.2 unsigned int Timeout[9]

timeout[i] is time in ms, after that max_speed[i+1] is applying.

It is using with buttons control only. Range: 0..65535.

4.9 control_settings_t Struct Reference

Control settings.

Data Fields

- unsigned int MaxSpeed [10]

  Array of speeds (full step) using with joystick and button control.
- unsigned int uMaxSpeed [10]

  Array of speeds (1/256 microstep) using with joystick and button control.
- unsigned int Timeout [9]

  timeout[i] is time in ms, after that max_speed[i+1] is applying.
- unsigned int MaxClickTime

  Maximum click time.
- unsigned int Flags

  Control flags.
- int DeltaPosition

  Shift (delta) of position.
- int uDeltaPosition

  Fractional part of the shift in micro steps (-255 .

4.9.1 Detailed Description

Control settings.

This structure contains control parameters. When choosing CTL_MODE=1 switches motor control with the joystick. In this mode, the joystick to the maximum engine tends Move at MaxSpeed [i], where i=0 if the previous use This mode is not selected another i. Buttons switch the room rate i. When CTL_MODE=2 is switched on motor control using the Left / right. When you click on the button motor starts to move in the appropriate direction at a speed MaxSpeed [0], at the end of time Timeout[i] motor move at a speed MaxSpeed [i+1]. at Transition from MaxSpeed [i] on MaxSpeed [i+1] to acceleration, as usual. The figure above shows the sensitivity of the joystick feature on its position.

See also

set_control_settings
get_control_settings
get_control_settings, set_control_settings

4.9.2 Field Documentation

4.9.2.1 unsigned int MaxClickTime

Maximum click time.

Prior to the expiration of this time the first speed isn't enabled.

4.9.2.2 unsigned int MaxSpeed[10]

Array of speeds (full step) using with joystick and button control.

Range: 0..1000000.

4.9.2.3 unsigned int Timeout[9]

timeout[i] is time in ms, after that max_speed[i+1] is applying.

It is using with buttons control only. Range: 0..65535.

4.9.2.4 int uDeltaPosition

Fractional part of the shift in micro steps (-255 .

. 255) is only used with stepper motor

4.9.2.5 unsigned int uMaxSpeed[10]

Array of speeds (1/256 microstep) using with joystick and button control.

Range: 0..255.

4.10 controller_name_t Struct Reference

Controller user name and flags of setting.

Data Fields

- char ControllerName [17]

  User conroller name.
- unsigned int CtrlFlags

  Flags of internal controller settings.

4.10.1 Detailed Description

Controller user name and flags of setting.

See also

get_controller_name, set_controller_name

4.10.2 Field Documentation

4.10.2.1 char ControllerName[17]

User conroller name.

Can be set by user for his/her convinience. Max string length: 16 chars.

4.11 ctp_settings_t Struct Reference

Control position settings(is only used with stepper motor).

Data Fields

- unsigned int CTPMinError

  Minimum contrast steps from step motor encoder position, wich set STATE_CTP_ERROR flag.
- unsigned int CTPFlags

  Position control flags.

4.11.1 Detailed Description

Control position settings(is only used with stepper motor).

When controlling the step motor with encoder (CTP_BASE 0) it is possible to detect the loss of steps. The controller knows the number of steps per revolution (GENG :: StepsPerRev) and the encoder resolution (GFBS :: IPT). When the control (flag CTP_ENABLED), the controller stores the current position in the footsteps of SM and the current position of the encoder. Further, at each step of the position encoder is converted into steps and if the difference is greater CTPMinError, a flag STATE_CTP_ERROR and set ALARM state. When controlling the step motor with speed sensor (CTP_BASE 1), the position is controlled by him. The active edge of input clock controller stores the current value of steps. Further, at each turn checks how many steps shifted. When a mismatch CTPMinError a flag STATE_CTP_ERROR and set ALARM state.

See also

set_ctp_settings
get_ctp_settings
get_ctp_settings, set_ctp_settings

4.11.2 Field Documentation

4.11.2.1 unsigned int CTPMinError

Minimum contrast steps from step motor encoder position, wich set STATE_CTP_ERROR flag.

Measured in steps step motor. Range: 0..255.

4.12 debug_read_t Struct Reference

Debug data.

Data Fields

- unsigned int DebugData [128]
  Arbitrary debug data.

4.12.1 Detailed Description

Debug data.

These data are used for device debugging by manufacturer only.

See also

get_debug_read

4.13 device_information_t Struct Reference

Read command controller information.

Data Fields

- char Manufacturer [5]
  Manufacturer.
- char ManufacturerId [3]
  Manufacturer id.
- char ProductDescription [9]
  Product description.

4.13.1 Detailed Description

Read command controller information.

The controller responds to this command in any state. Manufacturer field for all XI ∗∗ devices should contain the string ”XIMC” (validation is performed on it) The remaining fields contain information about the device.

See also

get_device_information
get_device_information_impl

4.14 edges_settings_calb_t Struct Reference

Data Fields

- unsigned int BorderFlags
  Border flags.
- unsigned int EnderFlags
  Limit switches flags.
- float LeftBorder
  Left border position, used if BORDER_IS_ENCODER flag is set.
- float RightBorder
  Right border position, used if BORDER_IS_ENCODER flag is set.

4.15 edges_settings_t Struct Reference

Edges settings.

Data Fields

- unsigned int BorderFlags
  Border flags.
- unsigned int EnderFlags
  Limit switches flags.
- int LeftBorder
  Left border position, used if BORDER_IS_ENCODER flag is set.
- int uLeftBorder
  Left border position in 1/256 microsteps(used with stepper motor only).
- int RightBorder
  Right border position, used if BORDER_IS_ENCODER flag is set.
- int uRightBorder
  Right border position in 1/256 microsteps.

4.15.1 Detailed Description

Edges settings.

This structure contains border and limit switches settings. Please load new engine settings when you change positioner etc. Please note that wrong engine settings lead to device malfunction, can lead to irreversible damage of board.

See also

set_edges_settings
get_edges_settings
get_edges_settings, set_edges_settings

4.15.2 Field Documentation

4.15.2.1 int LeftBorder

Left border position, used if BORDER_IS_ENCODER flag is set.

Range: -2147483647..2147483647.

4.15.2.2 int RightBorder

Right border position, used if BORDER_IS_ENCODER flag is set.

Range: -2147483647..2147483647.

4.15.2.3 int uLeftBorder

Left border position in 1/256 microsteps(used with stepper motor only).

Range: -255..255.

4.15.2.4 int uRightBorder

Right border position in 1/256 microsteps.

Range: -255..255(used with stepper motor only).

4.16 encoder_information_t Struct Reference

Encoder information.

Data Fields

- char Manufacturer [17]
  Manufacturer.
- char PartNumber [25]
  Series and PartNumber.

4.16.1 Detailed Description

Encoder information.

See also

set_encoder_information
get_encoder_information
get_encoder_information, set_encoder_information

4.16.2 Field Documentation

4.16.2.1 char Manufacturer[17]

Manufacturer.

Max string length: 16 chars.

4.16.2.2 char PartNumber[25]

Series and PartNumber.

Max string length: 24 chars.

4.17 encoder_settings_t Struct Reference

Encoder settings.

Data Fields

- float MaxOperatingFrequency
  Max operation frequency (kHz).
- float SupplyVoltageMin
  Minimum supply voltage (V).
- float SupplyVoltageMax
  Maximum supply voltage (V).
- float MaxCurrentConsumption
  Max current consumption (mA).
- unsigned int PPR
  The number of counts per revolution.
- unsigned int EncoderSettings
  Encoder settings flags.

4.17.1 Detailed Description

Encoder settings.

See also

set_encoder_settings
get_encoder_settings
get_encoder_settings, set_encoder_settings

4.17.2 Field Documentation

4.17.2.1 float MaxCurrentConsumption

Max current consumption (mA).

Data type: float.

4.17.2.2 float MaxOperatingFrequency

Max operation frequency (kHz).

Data type: float.

4.17.2.3 float SupplyVoltageMax

Maximum supply voltage (V).

Data type: float.

4.17.2.4 float SupplyVoltageMin

Minimum supply voltage (V).

Data type: float.

4.18 engine_settings_calb_t Struct Reference

Data Fields

- unsigned int NomVoltage

  Rated voltage.
- unsigned int NomCurrent

  Rated current.
- float NomSpeed

  Nominal speed.
- unsigned int EngineFlags

  Flags of engine settings.
- float Antiplay

  Number of pulses or steps for backlash (play) compensation procedure.
- unsigned int MicrostepMode

  Flags of microstep mode.
- unsigned int StepsPerRev

  Number of full steps per revolution(Used with steper motor only).

4.18.1 Field Documentation

4.18.1.1 float Antiplay

Number of pulses or steps for backlash (play) compensation procedure.

Used if ENGINE_ANTIPLAY flag is set.

4.18.1.2 unsigned int NomCurrent

Rated current.

Controller will keep current consumed by motor below this value if ENGINE_LIMIT_CURR flag is set. Range: 1..65535

4.18.1.3 float NomSpeed

Nominal speed.

Controller will keep motor speed below this value if ENGINE_LIMIT_RPM flag is set.

4.18.1.4 unsigned int NomVoltage

Rated voltage.

Controller will keep the voltage drop on motor below this value if ENGINE_LIMIT_VOLT flag is set(Used with DC only). Range: 1..65535

4.18.1.5 unsigned int StepsPerRev

Number of full steps per revolution(Used with steper motor only).

Range: 1..65535.

4.19 engine_settings_t Struct Reference

Engine settings.

Data Fields

- unsigned int NomVoltage

  Rated voltage.
- unsigned int NomCurrent

  Rated current.
- unsigned int NomSpeed

  Nominal speed (in whole steps / s or rpm for DC and stepper motor as a master encoder).
- unsigned int uNomSpeed

  The fractional part of a nominal speed in microsteps (is only used with stepper motor).
- unsigned int EngineFlags

  Flags of engine settings.
- int Antiplay

  Number of pulses or steps for backlash (play) compensation procedure.
- unsigned int MicrostepMode

  Flags of microstep mode.
- unsigned int StepsPerRev

  Number of full steps per revolution(Used with steper motor only).

4.19.1 Detailed Description

Engine settings.

This structure contains useful motor settings. These settings specify motor shaft movement algorithm, list of limitations and rated characteristics. All boards are supplied with standart set of engine setting on controller's flash memory. Please load new engine settings when you change motor, encoder, positioner etc. Please note that wrong engine settings lead to device malfunction, can lead to irreversible damage of board.

See also

set_engine_settings
get_engine_settings
get_engine_settings, set_engine_settings

4.19.2 Field Documentation

4.19.2.1 int Antiplay

Number of pulses or steps for backlash (play) compensation procedure.

Used if ENGINE_ANTIPLAY flag is set. Range: -32768..32767

4.19.2.2 unsigned int NomCurrent

Rated current.

Controller will keep current consumed by motor below this value if ENGINE_LIMIT_CURR flag is set. Range: 1..65535

4.19.2.3 unsigned int NomSpeed

Nominal speed (in whole steps / s or rpm for DC and stepper motor as a master encoder).

Controller will keep motor shaft RPM below this value if ENGINE_LIMIT_RPM flag is set. Range: 1..1000000.

4.19.2.4 unsigned int NomVoltage

Rated voltage.

Controller will keep the voltage drop on motor below this value if ENGINE_LIMIT_VOLT flag is set(Used with DC only). Range: 1..65535

4.19.2.5 unsigned int StepsPerRev

Number of full steps per revolution(Used with steper motor only).

Range: 1..65535.

4.19.2.6 unsigned int uNomSpeed

The fractional part of a nominal speed in microsteps (is only used with stepper motor).

Range: 0..255

4.20 entype_settings_t Struct Reference

Engine type and driver type settings.

Data Fields

- unsigned int EngineType
  Flags of engine type.
- unsigned int DriverType
  Flags of driver type.

4.20.1 Detailed Description

Engine type and driver type settings.

Parameters

id	an identifier of device
EngineType	engine type
DriverType	driver type

See also

get_entype_settings, set_entype_settings

4.21 extio_settings_t Struct Reference

EXTIO settings.

Data Fields

- unsigned int EXTIOSetupFlags
  External IO setup flags.
- unsigned int EXTIOModeFlags
  External IO mode flags.

4.21.1 Detailed Description

EXTIO settings.

This structure contains all EXTIO settings. By default input event are signalled through rising front and output states are signalled by high logic state.

See also

get_extio_settings
set_extio_settings
get_extio_settings, set_extio_settings

4.22 feedback_settings_t Struct Reference

Feedback settings.

Data Fields

- unsigned int IPS
  The number of measured counts per revolution encoder.
- unsigned int FeedbackType
  Feedback type.
- unsigned int FeedbackFlags
  Describes feedback flags.
- unsigned int HallSPR
  The number of hall steps per revolution.
- int HallShift
  Phase shift between output signal on BLDC engine and hall sensor input(0 - when only active the Hall sensor, the output state is a positive voltage on the winding A and a negative voltage on the winding B).

4.22.1 Detailed Description

Feedback settings.

This structure contains feedback settings.

See also

get_feedback_settings, set_feedback_settings

4.23 gear_information_t Struct Reference

Gear information.

Data Fields

- char Manufacturer [17]

  Manufacturer.
- char PartNumber [25]

  Series and PartNumber.

4.23.1 Detailed Description

Gear information.

See also

set_gear_information
get_gear_information
get_gear_information, set_gear_information

4.23.2 Field Documentation

4.23.2.1 char Manufacturer[17]

Manufacturer.

Max string length: 16 chars.

4.23.2.2 char PartNumber[25]

Series and PartNumber.

Max string length: 24 chars.

4.24 gear_settings_t Struct Reference

Gear setings.

Data Fields

- float ReductionIn

  Input reduction coefficient.
- float ReductionOut

  Output reduction coefficient.
- float RatedInputTorque

  Max continuous torque (N m).
- float RatedInputSpeed

  Max speed on the input shaft (rpm).
- float MaxOutputBacklash

  Output backlash of the reduction gear(degree).
- float InputInertia

  Equivalent input gear inertia (g cm2).
- float Efficiency

  Reduction gear efficiency (%).

4.24.1 Detailed Description

Gear setings.

See also

set_gear_settings
get_gear_settings
get_gear_settings, set_gear_settings

4.24.2 Field Documentation

4.24.2.1 float Efficiency

Reduction gear efficiency (%).

Data type: float.

4.24.2.2 float InputInertia

Equivalent input gear inertia (g cm2).

Data type: float.

4.24.2.3 float MaxOutputBacklash

Output backlash of the reduction gear(degree).

Data type: float.

4.24.2.4 float RatedInputSpeed

Max speed on the input shaft (rpm).

Data type: float.

4.24.2.5 float RatedInputTorque

Max continuous torque (N m).

Data type: float.

4.24.2.6 float ReductionIn

Input reduction coefficient.

(Output = (ReductionOut / ReductionIn) $*$ Input) Data type: float.

4.24.2.7 float ReductionOut

Output reduction coefficient.

(Output = (ReductionOut / ReductionIn) $*$ Input) Data type: float.

4.25 get_position_calb_t Struct Reference

Data Fields

- float Position
  The position in the engine.
- long long EncPosition
  Encoder position.

4.26 get_position_t Struct Reference

Position information.

Data Fields

- int Position
  The position of the whole steps in the engine.
- int uPosition
  Microstep position is only used with stepper motors.
- long long EncPosition
  Encoder position.

4.26.1 Detailed Description

Position information.

Useful structure that contains position value in steps and micro for stepper motor and encoder steps of all engines.

See also

get_position

4.27 hallsensor_information_t Struct Reference

Hall sensor information.

Data Fields

- char Manufacturer [17]
  Manufacturer.
- char PartNumber [25]
  Series and PartNumber.

4.27.1 Detailed Description

Hall sensor information.

See also

set_hallsensor_information
get_hallsensor_information
get_hallsensor_information, set_hallsensor_information

4.27.2 Field Documentation

4.27.2.1 char Manufacturer[17]

Manufacturer.

Max string length: 16 chars.

4.27.2.2 char PartNumber[25]

Series and PartNumber.

Max string length: 24 chars.

4.28 hallsensor_settings_t Struct Reference

Hall sensor settings.

Data Fields

- float MaxOperatingFrequency
  Max operation frequency (kHz).
- float SupplyVoltageMin
  Minimum supply voltage (V).
- float SupplyVoltageMax
  Maximum supply voltage (V).
- float MaxCurrentConsumption
  Max current consumption (mA).
- unsigned int PPR
  The number of counts per revolution.

4.28.1 Detailed Description

Hall sensor settings.

See also

set_hallsensor_settings
get_hallsensor_settings
get_hallsensor_settings, set_hallsensor_settings

4.28.2 Field Documentation

4.28.2.1 float MaxCurrentConsumption

Max current consumption (mA).

Data type: float.

4.28.2.2 float MaxOperatingFrequency

Max operation frequency (kHz).

Data type: float.

4.28.2.3 float SupplyVoltageMax

Maximum supply voltage (V).

Data type: float.

4.28.2.4 float SupplyVoltageMin

Minimum supply voltage (V).

Data type: float.

4.29 home_settings_calb_t Struct Reference

Data Fields

- float FastHome
  Speed used for first motion.
- float SlowHome
  Speed used for second motion.
- float HomeDelta
  Distance from break point.
- unsigned int HomeFlags
  Home settings flags.

4.30 home_settings_t Struct Reference

Position calibration settings.

Data Fields

- unsigned int FastHome
  Speed used for first motion.
- unsigned int uFastHome
  Part of the speed for first motion, microsteps.
- unsigned int SlowHome
  Speed used for second motion.
- unsigned int uSlowHome
  Part of the speed for second motion, microsteps.
- int HomeDelta
  Distance from break point.
- int uHomeDelta
  Part of the delta distance, microsteps.
- unsigned int HomeFlags
  Home settings flags.

4.30.1 Detailed Description

Position calibration settings.

This structure contains settings used in position calibrating. It specify behaviour of calibrating position.

See also

get_home_settings
set_home_settings
command_home
get_home_settings, set_home_settings

4.30.2 Field Documentation

4.30.2.1 unsigned int FastHome

Speed used for first motion.

Range: 0..1000000.

4.30.2.2 int HomeDelta

Distance from break point.

Range: -2147483647..2147483647.

4.30.2.3 unsigned int SlowHome

Speed used for second motion.

Range: 0..1000000.

4.30.2.4 unsigned int uFastHome

Part of the speed for first motion, microsteps.

Range: 0..255.

4.30.2.5 int uHomeDelta

Part of the delta distance, microsteps.

Range: -255..255.

4.30.2.6 unsigned int uSlowHome

Part of the speed for second motion, microsteps.

Range: 0..255.

4.31 joystick_settings_t Struct Reference

Joystick settings.

Data Fields

- unsigned int JoyLowEnd
  Joystick lower end position.
- unsigned int JoyCenter
  Joystick center position.
- unsigned int JoyHighEnd
  Joystick higher end position.
- unsigned int ExpFactor
  Exponential nonlinearity factor.
- unsigned int DeadZone
  Joystick dead zone.
- unsigned int JoyFlags
  Joystick flags.

4.31.1 Detailed Description

Joystick settings.

This structure contains joystick parameters. If joystick position is outside DeadZone limits from the central position a movement with speed, defined by the joystick DeadZone edge to 100% deviation, begins. Joystick positions inside DeadZone limits correspond to zero speed (soft stop of motion) and positions beyond Low and High limits correspond MaxSpeed [i] or -MaxSpeed [i] (see command SCTL), where i = 0 by default and can be changed with left/right buttons (see command SCTL). If next speed in list is zero (both integer and microstep parts), the button press is ignored. First speed in list shouldn't be zero. The relationship between the deviation and the rate is exponential, allowing no switching speed combine high mobility and accuracy.

set_joystick_settings
get_joystick_settings
get_joystick_settings, set_joystick_settings

4.32 motor_information_t Struct Reference

motor information.

Data Fields

- char Manufacturer [17]
  Manufacturer.
- char PartNumber [25]
  Series and PartNumber.

4.32.1 Detailed Description

motor information.

See also

set_motor_information
get_motor_information
get_motor_information, set_motor_information

4.32.2 Field Documentation

4.32.2.1 char Manufacturer[17]

Manufacturer.

Max string length: 16 chars.

4.32.2.2 char PartNumber[25]

Series and PartNumber.

Max string length: 24 chars.

4.33 motor_settings_t Struct Reference

motor settings.

Data Fields

- unsigned int MotorType

  Motor Type flags.
- unsigned int ReservedField

  Reserved.
- unsigned int Poles

  Number of pole pairs for DC or BLDC motors or number of steps per rotation for stepper motor.
- unsigned int Phases

  Number of phases for BLDC motors.
- float NominalVoltage

  Nominal voltage on winding (B).
- float NominalCurrent

  Maximum direct current in winding for DC and BLDC engines, nominal current in windings for stepper motor (A).
- float NominalSpeed

  Nominal speed(rpm).
- float NominalTorque

  Nominal torque(mN m).
- float NominalPower

  Nominal power(W).
- float WindingResistance

  Resistance of windings for DC engine, each of two windings for stepper motor or each of there windings for BLDC engine(Ohm).
- float WindingInductance

  Inductance of windings for DC engine, each of two windings for stepper motor or each of there windings for BLDC engine(mH).
- float RotorInertia

  Rotor inertia(g cm2).
- float StallTorque

  Torque hold position for a stepper motor or torque at a motionless rotor for other types of engines (mN m).
- float DetentTorque

  Holding torque position with un-powered coils (mN m).
- float TorqueConstant

Torque constant, which determines the aspect ratio of maximum moment of force from the rotor current flowing in the coil (mN m / A).

- float SpeedConstant

  Velocity constant, which determines the value or amplitude of the induced voltage on the motion of DC or BLDC motor (rpm / V) or stepper motor (steps/s / V).
- float SpeedTorqueGradient

  Speed torque gradient (rpm / mN m).
- float MechanicalTimeConstant

  Mechanical time constant (ms).
- float MaxSpeed

  The maximum speed for stepper motors (steps/s) or DC and BLDC motors (rmp).
- float MaxCurrent

  The maximum current in the winding (A).
- float MaxCurrentTime

  Safe duration of overcurrent in the winding (ms).
- float NoLoadCurrent

  The current consumption in idle mode (A).
- float NoLoadSpeed

  Idle speed (rpm).

4.33.1 Detailed Description

motor settings.

See also

set_motor_settings
get_motor_settings
get_motor_settings, set_motor_settings

4.33.2 Field Documentation

4.33.2.1 float DetentTorque

Holding torque position with un-powered coils (mN m).

Data type: float.

4.33.2.2 float MaxCurrent

The maximum current in the winding (A).

Data type: float.

4.33.2.3 float MaxCurrentTime

Safe duration of overcurrent in the winding (ms).

Data type: float.

4.33.2.4 float MaxSpeed

The maximum speed for stepper motors (steps/s) or DC and BLDC motors (rmp).

Data type: float.

4.33.2.5 float MechanicalTimeConstant

Mechanical time constant (ms).

Data type: float.

4.33.2.6 float NoLoadCurrent

The current consumption in idle mode (A).

Used for DC and BLDC motors. Data type: float.

4.33.2.7 float NoLoadSpeed

Idle speed (rpm).

Used for DC and BLDC motors. Data type: float.

4.33.2.8 float NominalCurrent

Maximum direct current in winding for DC and BLDC engines, nominal current in windings for stepper motor (A).

Data type: float.

4.33.2.9 float NominalPower

Nominal power(W).

Used for DC and BLDC engine. Data type: float.

4.33.2.10 float NominalSpeed

Nominal speed(rpm).

Used for DC and BLDC engine. Data type: float.

4.33.2.11 float NominalTorque

Nominal torque(mN m).

Used for DC and BLDC engine. Data type: float.

4.33.2.12 float NominalVoltage

Nominal voltage on winding (B).

Data type: float

4.33.2.13 float RotorInertia

Rotor inertia(g cm2).

Data type: float.

4.33.2.14 float SpeedConstant

Velocity constant, which determines the value or amplitude of the induced voltage on the motion of DC or BLDC motor (rpm / V) or stepper motor (steps/s / V).

Data type: float.

4.33.2.15 float SpeedTorqueGradient

Speed torque gradient (rpm / mN m).

Data type: float.

4.33.2.16 float StallTorque

Torque hold position for a stepper motor or torque at a motionless rotor for other types of engines (mN m).

Data type: float.

4.33.2.17 float TorqueConstant

Torque constant, which determines the aspect ratio of maximum moment of force from the rotor current flowing in the coil (mN m / A).

Used mainly for DC motors. Data type: float.

4.33.2.18 float WindingInductance

Inductance of windings for DC engine, each of two windings for stepper motor or each of there windings for BLDC engine(mH).

Data type: float.

4.33.2.19 float WindingResistance

Resistance of windings for DC engine, each of two windings for stepper motor or each of there windings for BLDC engine(Ohm).

Data type: float.

4.34 move_settings_calb_t Struct Reference

Data Fields

- float Speed

  Target speed.
- float Accel

  Motor shaft acceleration, steps/s^2(stepper motor) or RPM/s(DC).
- float Decel

  Motor shaft deceleration, steps/s^2(stepper motor) or RPM/s(DC).
- float AntiplaySpeed

  Speed in antiplay mode.

4.35 move_settings_t Struct Reference

Move settings.

Data Fields

- unsigned int Speed

  Target speed(for stepper motor: steps / c, for DC: rpm).
- unsigned int uSpeed

  Target speed in 1/256 microsteps/s.
- unsigned int Accel

  Motor shaft acceleration, steps/s^2(stepper motor) or RPM/s(DC).
- unsigned int Decel

  Motor shaft deceleration, steps/s^2(stepper motor) or RPM/s(DC).
- unsigned int AntiplaySpeed

  Speed in antiplay mode, full steps/s(stepper motor) or RPM(DC).
- unsigned int uAntiplaySpeed

  Speed in antiplay mode, 1/256 microsteps/s.

4.35.1 Detailed Description

Move settings.

See also

set_move_settings
get_move_settings
get_move_settings, set_move_settings

4.35.2 Field Documentation

4.35.2.1 unsigned int Accel

Motor shaft acceleration, steps/s^2(stepper motor) or RPM/s(DC).

Range: 0..65535.

4.35.2.2 unsigned int AntiplaySpeed

Speed in antiplay mode, full steps/s(stepper motor) or RPM(DC).

Range: 0..1000000.

4.35.2.3 unsigned int Decel

Motor shaft deceleration, steps/s^2(stepper motor) or RPM/s(DC).

Range: 0..65535.

4.35.2.4 unsigned int Speed

Target speed(for stepper motor: steps / c, for DC: rpm).

Range: 0..1000000.

4.35.2.5 unsigned int uAntiplaySpeed

Speed in antiplay mode, 1/256 microsteps/s.

Used with stepper motor only. Range: 0..255.

4.35.2.6 unsigned int uSpeed

Target speed in 1/256 microsteps/s.

Using with stepper motor only. Range: 0..255.

4.36 pid_settings_t Struct Reference

PID settings.

Data Fields

- unsigned int KpU
  Proportional gain for voltage PID routine.
- unsigned int KiU
  Integral gain for voltage PID routine.
- unsigned int KdU
  Differential gain for voltage PID routine.

4.36.1 Detailed Description

PID settings.

This structure contains factors for PID routine. Range: 0..65535. It specify behaviour of PID routine for voltage. These factors are slightly different for different positioners. All boards are supplied with standart set of PID setting on controller's flash memory. Please load new PID settings when you change positioner. Please note that wrong PID settings lead to device malfunction.

See also

set_pid_settings
get_pid_settings
get_pid_settings, set_pid_settings

4.37 power_settings_t Struct Reference

Step motor power settings.

Data Fields

- unsigned int HoldCurrent
  Current in holding regime, percent of nominal.
- unsigned int CurrReductDelay
  Time in ms from going to STOP state to reducting current.
- unsigned int PowerOffDelay
  Time in s from going to STOP state to turning power off.

- unsigned int CurrentSetTime
  Time in ms to reach nominal current.
- unsigned int PowerFlags
  Flags of power settings of stepper motor.

4.37.1 Detailed Description

Step motor power settings.

See also

set_move_settings
get_move_settings
get_power_settings, set_power_settings

4.37.2 Field Documentation

4.37.2.1 unsigned int CurrentSetTime

Time in ms to reach nominal current.

Range: 0..65535.

4.37.2.2 unsigned int CurrReductDelay

Time in ms from going to STOP state to reducting current.

Range: 0..65535.

4.37.2.3 unsigned int HoldCurrent

Current in holding regime, percent of nominal.

Range: 0..100.

4.37.2.4 unsigned int PowerOffDelay

Time in s from going to STOP state to turning power off.

Range: 0..65535.

4.38 secure_settings_t Struct Reference

This structure contains raw analog data from ADC embedded on board.

Data Fields

- unsigned int LowUpwrOff
  Lower voltage limit to turn off the motor, in mV.
- unsigned int CriticalIpwr
  Maximum motor current which triggers ALARM state, in mA.
- unsigned int CriticalUpwr
  Maximum motor voltage which triggers ALARM state, in mV.

- unsigned int CriticalT

  Maximum temperature, which triggers ALARM state, in tenths of degrees Celcius.
- unsigned int CriticalIusb

  Maximum USB current which triggers ALARM state, in mA.
- unsigned int CriticalUusb

  Maximum USB voltage which triggers ALARM state, in mV.
- unsigned int MinimumUusb

  Minimum USB voltage which triggers ALARM state, in mV.
- unsigned int Flags

  Flags of secure settings.

4.38.1 Detailed Description

This structure contains raw analog data from ADC embedded on board.

These data used for device testing and deep recalibraton by manufacturer only.

See also

get_secure_settings
set_secure_settings
get_secure_settings, set_secure_settings

4.38.2 Field Documentation

4.38.2.1 unsigned int CriticalIpwr

Maximum motor current which triggers ALARM state, in mA.

Range: 0..65535.

4.38.2.2 unsigned int CriticalIusb

Maximum USB current which triggers ALARM state, in mA.

Range: 0..65535.

4.38.2.3 unsigned int CriticalT

Maximum temperature, which triggers ALARM state, in tenths of degrees Celcius.

Range: 0..65535.

4.38.2.4 unsigned int CriticalUpwr

Maximum motor voltage which triggers ALARM state, in mV.

Range: 0..65535.

4.38.2.5 unsigned int CriticalUusb

Maximum USB voltage which triggers ALARM state, in mV.

Range: 0..65535.

4.38.2.6 unsigned int LowUpwrOff

Lower voltage limit to turn off the motor, in mV.

Range: 0..65535.

4.38.2.7 unsigned int MinimumUusb

Minimum USB voltage which triggers ALARM state, in mV.

Range: 0..65535.

4.39 serial_number_t Struct Reference

Serial number structure.

Data Fields

- unsigned int SN
  New board serial number.
- unsigned int Key [32]
  Protection key (256 bit).

4.39.1 Detailed Description

Serial number structure.

The structure keep new serial number and valid key. The SN is changed and saved when transmitted key matches stored key. Can be used by manufacturer only.

See also

set_serial_number

4.40 set_position_calb_t Struct Reference

Data Fields

- float Position
  The position in the engine.
- long long EncPosition
  Encoder position.
- unsigned int PosFlags
  Position setting flags.

4.41 set_position_t Struct Reference

Position information.

Data Fields

- int Position
  The position of the whole steps in the engine.
- int uPosition
  Microstep position is only used with stepper motors.
- long long EncPosition
  Encoder position.
- unsigned int PosFlags
  Position setting flags.

4.41.1 Detailed Description

Position information.

Useful structure that contains position value in steps and micro for stepper motor and encoder steps of all engines.

See also

set_position

4.42 stage_information_t Struct Reference

Stage information.

Data Fields

- char Manufacturer [17]
  Manufacturer.
- char PartNumber [25]
  Series and PartNumber.

4.42.1 Detailed Description

Stage information.

See also

set_stage_information
get_stage_information
get_stage_information, set_stage_information

4.42.2 Field Documentation

4.42.2.1 char Manufacturer[17]

Manufacturer.

Max string length: 16 chars.

4.42.2.2 char PartNumber[25]

Series and PartNumber.

Max string length: 24 chars.

4.43 stage_name_t Struct Reference

Stage user name.

Data Fields

- char PositionerName [17]
  User positioner name.

4.43.1 Detailed Description

Stage user name.

See also

get_stage_name, set_stage_name

4.43.2 Field Documentation

4.43.2.1 char PositionerName[17]

User positioner name.

Can be set by user for his/her convinience. Max string length: 16 chars.

4.44 stage_settings_t Struct Reference

Stage settings.

Data Fields

- float LeadScrewPitch
  Lead screw pitch (mm).
- char Units [9]
  Units for MaxSpeed and TravelRange fields of the structure (steps, degrees, mm, ...).
- float MaxSpeed
  Max speed (Units/c).
- float TravelRange
  Travel range (Units).
- float SupplyVoltageMin
  Supply voltage minimum (V).
- float SupplyVoltageMax
  Supply voltage maximum (V).
- float MaxCurrentConsumption

Max current consumption (A).

- float HorizontalLoadCapacity

  Horizontal load capacity (kg).

- float VerticalLoadCapacity

  Vertical load capacity (kg).

4.44.1 Detailed Description

Stage settings.

See also

set_stage_settings
get_stage_settings
get_stage_settings, set_stage_settings

4.44.2 Field Documentation

4.44.2.1 float HorizontalLoadCapacity

Horizontal load capacity (kg).

Data type: float.

4.44.2.2 float LeadScrewPitch

Lead screw pitch (mm).

Data type: float.

4.44.2.3 float MaxCurrentConsumption

Max current consumption (A).

Data type: float.

4.44.2.4 float MaxSpeed

Max speed (Units/c).

Data type: float.

4.44.2.5 float SupplyVoltageMax

Supply voltage maximum (V).

Data type: float.

4.44.2.6 float SupplyVoltageMin

Supply voltage minimum (V).

Data type: float.

4.44.2.7 float TravelRange

Travel range (Units).

Data type: float.

4.44.2.8 char Units[9]

Units for MaxSpeed and TravelRange fields of the structure (steps, degrees, mm, ...).

Max string length: 8 chars.

4.44.2.9 float VerticalLoadCapacity

Vertical load capacity (kg).

Data type: float.

4.45 status_calb_t Struct Reference

Data Fields

- unsigned int MoveSts
  Flags of move state.
- unsigned int MvCmdSts
  Move command state.
- unsigned int PWRSts
  Flags of power state of stepper motor.
- unsigned int EncSts
  Encoder state.
- unsigned int WindSts
  Winding state.
- float CurPosition
  Current position.
- long long EncPosition
  Current encoder position.
- float CurSpeed
  Motor shaft speed.
- int Ipwr
  Engine current.
- int Upwr
  Power supply voltage.
- int Iusb
  USB current consumption.
- int Uusb
  USB voltage.
- int CurT
  Temperature in tenths of degrees C.
- unsigned int Flags
  Status flags.
- unsigned int GPIOFlags
  Status flags.
- unsigned int CmdBufFreeSpace
  This field shows the amount of free cells buffer synchronization chain.

4.46 status_t Struct Reference

Device state.

Data Fields

- unsigned int MoveSts
  Flags of move state.
- unsigned int MvCmdSts
  Move command state.
- unsigned int PWRSts
  Flags of power state of stepper motor.
- unsigned int EncSts
  Encoder state.
- unsigned int WindSts
  Winding state.
- int CurPosition
  Current position.
- int uCurPosition
  Step motor shaft position in 1/256 microsteps.
- long long EncPosition
  Current encoder position.
- int CurSpeed
  Motor shaft speed.
- int uCurSpeed
  Part of motor shaft speed in 1/256 microsteps.
- int Ipwr
  Engine current.
- int Upwr
  Power supply voltage.
- int Iusb
  USB current consumption.
- int Uusb
  USB voltage.
- int CurT
  Temperature in tenths of degrees C.
- unsigned int Flags
  Status flags.
- unsigned int GPIOFlags
  Status flags.
- unsigned int CmdBufFreeSpace
  This field shows the amount of free cells buffer synchronization chain.

4.46.1 Detailed Description

Device state.

Useful structure that contains current controller state, including speed, position and boolean flags.

See also

get_status_impl

4.46.2 Field Documentation

4.46.2.1 int uCurPosition

Step motor shaft position in 1/256 microsteps.

Used only with stepper motor.

4.46.2.2 int uCurSpeed

Part of motor shaft speed in 1/256 microsteps.

Used only with stepper motor.

4.47 sync_in_settings_calb_t Struct Reference

Data Fields

- unsigned int SyncInFlags
  Flags for synchronization input setup.
- unsigned int ClutterTime
  Input synchronization pulse dead time (mks).
- float Position
  Desired position or shift.
- float Speed
  Target speed.

4.47.1 Field Documentation

4.47.1.1 unsigned int ClutterTime

Input synchronization pulse dead time (mks).

Range: 0..65535

4.48 sync_in_settings_t Struct Reference

Synchronization settings.

Data Fields

- unsigned int SyncInFlags
  Flags for synchronization input setup.
- unsigned int ClutterTime
  Input synchronization pulse dead time (mks).
- int Position
  Desired position or shift (whole steps)
- int uPosition
  The fractional part of a position or shift in microsteps (-255 .
- unsigned int Speed
  Target speed(for stepper motor: steps / c, for DC: rpm).

- unsigned int uSpeed

  Target speed in microsteps/s.

4.48.1 Detailed Description

Synchronization settings.

This structure contains all synchronization settings, modes, periods and flags. It specifes behaviour of input synchronization. All boards are supplied with standart set of these settings.

See also

get_sync_in_settings
set_sync_in_settings
get_sync_in_settings, set_sync_in_settings

4.48.2 Field Documentation

4.48.2.1 unsigned int ClutterTime

Input synchronization pulse dead time (mks).

Range: 0..65535

4.48.2.2 unsigned int Speed

Target speed(for stepper motor: steps / c, for DC: rpm).

Range: 0..1000000.

4.48.2.3 int uPosition

The fractional part of a position or shift in microsteps (-255 .

. 255)(is only used with stepper motor)

4.48.2.4 unsigned int uSpeed

Target speed in microsteps/s.

Using with stepper motor only. Range: 0..255.

4.49 sync_out_settings_calb_t Struct Reference

Data Fields

- unsigned int SyncOutFlags

  Flags of synchronization output.
- unsigned int SyncOutPulseSteps

  This value specifies duration of output pulse.
- unsigned int SyncOutPeriod

  This value specifies number of encoder pulses or steps between two output synchronization pulses when SYNCOUT_ONPERIOD is set.
- float Accuracy

This is the neighborhood around the target coordinates, which is getting hit in the target position and the momentum generated by the stop.

4.49.1 Field Documentation

4.49.1.1 unsigned int SyncOutPeriod

This value specifies number of encoder pulses or steps between two output synchronization pulses when SYNCOUT_ONPERIOD is set.

Range: 0..65535

4.49.1.2 unsigned int SyncOutPulseSteps

This value specifies duration of output pulse.

It is measured microseconds when SYNCOUT_IN_STEPS flag is cleared or in encoder pulses or motor steps when SYNCOUT_IN_STEPS is set. Range: 0..65535

4.50 sync_out_settings_t Struct Reference

Synchronization settings.

Data Fields

- unsigned int SyncOutFlags

  Flags of synchronization output.
- unsigned int SyncOutPulseSteps

  This value specifies duration of output pulse.
- unsigned int SyncOutPeriod

  This value specifies number of encoder pulses or steps between two output synchronization pulses when SYNCOUT_ONPERIOD is set.
- unsigned int Accuracy

  This is the neighborhood around the target coordinates, which is getting hit in the target position and the momentum generated by the stop.
- unsigned int uAccuracy

  This is the neighborhood around the target coordinates in micro steps (only used with stepper motor).

4.50.1 Detailed Description

Synchronization settings.

This structure contains all synchronization settings, modes, periods and flags. It specifes behaviour of output synchronization. All boards are supplied with standart set of these settings.

See also

get_sync_out_settings
set_sync_out_settings
get_sync_out_settings, set_sync_out_settings

4.50.2 Field Documentation

4.50.2.1 unsigned int Accuracy

This is the neighborhood around the target coordinates, which is getting hit in the target position and the momentum generated by the stop.

Range: 0..4294967295.

4.50.2.2 unsigned int SyncOutPeriod

This value specifies number of encoder pulses or steps between two output synchronization pulses when SYNCOUT_ONPERIOD is set.

Range: 0..65535

4.50.2.3 unsigned int SyncOutPulseSteps

This value specifies duration of output pulse.

It is measured microseconds when SYNCOUT_IN_STEPS flag is cleared or in encoder pulses or motor steps when SYNCOUT_IN_STEPS is set. Range: 0..65535

4.50.2.4 unsigned int uAccuracy

This is the neighborhood around the target coordinates in micro steps (only used with stepper motor).

Range: 0 .. 255.

4.51 uart_settings_t Struct Reference

UART settings.

Data Fields

- unsigned int Speed
  UART speed.
- unsigned int UARTSetupFlags
  UART parity flags.

4.51.1 Detailed Description

UART settings.

This structure contains UART settings.

See also

get_uart_settings
set_uart_settings
get_uart_settings, set_uart_settings

Chapter 5

File Documentation

5.1 ximc.h File Reference

Header file for libximc library.

Data Structures

- struct calibration_t

  Calibration companion structure TODO docme.
- struct feedback_settings_t

  Feedback settings.
- struct home_settings_t

  Position calibration settings.
- struct home_settings_calb_t
- struct move_settings_t

  Move settings.
- struct move_settings_calb_t
- struct engine_settings_t

  Engine settings.
- struct engine_settings_calb_t
- struct entype_settings_t

  Engine type and driver type settings.
- struct power_settings_t

  Step motor power settings.
- struct secure_settings_t

  This structure contains raw analog data from ADC embedded on board.
- struct edges_settings_t

  Edges settings.
- struct edges_settings_calb_t
- struct pid_settings_t

  PID settings.
- struct sync_in_settings_t

  Synchronization settings.
- struct sync_in_settings_calb_t
- struct sync_out_settings_t

  Synchronization settings.
- struct sync_out_settings_calb_t

- struct extio_settings_t
  EXTIO settings.
- struct brake_settings_t
  Brake settings.
- struct control_settings_t
  Control settings.
- struct control_settings_calb_t
- struct joystick_settings_t
  Joystick settings.
- struct ctp_settings_t
  Control position settings(is only used with stepper motor).
- struct uart_settings_t
  UART settings.
- struct controller_name_t
  Controller user name and flags of setting.
- struct add_sync_in_action_t
  This command adds one element of the FIFO commands.
- struct add_sync_in_action_calb_t
- struct get_position_t
  Position information.
- struct get_position_calb_t
- struct set_position_t
  Position information.
- struct set_position_calb_t
- struct status_t
  Device state.
- struct status_calb_t
- struct chart_data_t
  Additional device state.
- struct device_information_t
  Read command controller information.
- struct serial_number_t
  Serial number structure.
- struct analog_data_t
  Analog data.
- struct debug_read_t
  Debug data.
- struct stage_name_t
  Stage user name.
- struct stage_information_t
  Stage information.
- struct stage_settings_t
  Stage settings.
- struct motor_information_t
  motor information.
- struct motor_settings_t
  motor settings.
- struct encoder_information_t
  Encoder information.
- struct encoder_settings_t
  Encoder settings.

- struct hallsensor_information_t
  Hall sensor information.
- struct hallsensor_settings_t
  Hall sensor settings.
- struct gear_information_t
  Gear information.
- struct gear_settings_t
  Gear setings.
- struct accessories_settings_t
  Additional accessories information.

Macros

- #define XIMC_API
  Library import macro Macros allows to automatically import function from shared library.
- #define XIMC_CALLCONV
  Library calling convention macros.
- #define device_undefined -1
  Handle specified undefined device.

Result statuses

- #define result_ok 0
  success
- #define result_error -1
  generic error
- #define result_not_implemented -2
  function is not implemented
- #define result_value_error -3
  value error
- #define result_nodevice -4
  device is lost

Logging level

- #define LOGLEVEL_ERROR 0x01
  Logging level - error.
- #define LOGLEVEL_WARNING 0x02
  Logging level - warning.
- #define LOGLEVEL_INFO 0x03
  Logging level - info.
- #define LOGLEVEL_DEBUG 0x04
  Logging level - debug.

Enumerate devices flags

- #define ENUMERATE_PROBE 0x01
  Check if a device with OS name name is XIMC device.
- #define ENUMERATE_ALL_COM 0x02
  Check all COM devices.

Flags of move state

Specify move states.

See also

get_status
status_t::move_state
status_t::MoveSts, *get_status_impl*

- #define MOVE_STATE_MOVING 0x01
  This flag indicates that controller is trying to move the motor.
- #define MOVE_STATE_TARGET_SPEED 0x02
  Target speed is reached, if flag set.
- #define MOVE_STATE_ANTIPLAY 0x04
  Motor is playing compensation, if flag set.

Flags of internal controller settings

See also

set_controller_name
get_controller_name
controller_name_t::CtrlFlags, *get_controller_name*, *set_controller_name*

- #define EEPROM_PRECEDENCE 0x01
  If the flag is set settings from external EEPROM override controller settings.

Flags of power state of stepper motor

Specify power states.

See also

status_t::power_state
get_status
status_t::PWRSts, *get_status_impl*

- #define PWR_STATE_UNKNOWN 0x00
  Unknown state, should never happen.
- #define PWR_STATE_OFF 0x01
  Motor windings are disconnected from the driver.
- #define PWR_STATE_NORM 0x03
  Motor windings are powered by nominal current.
- #define PWR_STATE_REDUCT 0x04
  Motor windings are powered by reduced current to lower power consumption.
- #define PWR_STATE_MAX 0x05
  Motor windings are powered by maximum current driver can provide at this voltage.

Status flags

GPIO state flags returned by device query. Contains boolean part of controller state. May be combined with bitwise OR.

See also

status_t::flags
get_status
status_t::GPIOFlags, *get_status_impl*

- #define STATE_CONTR 0x0003F
  Flags of controller states.
- #define STATE_ERRC 0x00001
  Command error encountered.
- #define STATE_ERRD 0x00002
  Data integrity error encountered.

- #define STATE_ERRV 0x00004
  Value error encountered.
- #define STATE_EEPROM_CONNECTED 0x00010
  EEPROM with settings is connected.
- #define STATE_SECUR 0x3FFC0
  Flags of security.
- #define STATE_ALARM 0x00040
  Controller is in alarm state indicating that something dangerous had happened.
- #define STATE_CTP_ERROR 0x00080
  Control position error(is only used with stepper motor).
- #define STATE_POWER_OVERHEAT 0x00100
  Power driver overheat.
- #define STATE_CONTROLLER_OVERHEAT 0x00200
  Controller overheat.
- #define STATE_OVERLOAD_POWER_VOLTAGE 0x00400
  Power voltage exceeds safe limit.
- #define STATE_OVERLOAD_POWER_CURRENT 0x00800
  Power current exceeds safe limit.
- #define STATE_OVERLOAD_USB_VOLTAGE 0x01000
  USB voltage exceeds safe limit.
- #define STATE_LOW_USB_VOLTAGE 0x02000
  USB voltage is insufficient for normal operation.
- #define STATE_OVERLOAD_USB_CURRENT 0x04000
  USB current exceeds safe limit.
- #define STATE_BORDERS_SWAP_MISSET 0x08000
  Engine stuck at the wrong edge.
- #define STATE_LOW_POWER_VOLTAGE 0x10000
  Power voltage is lower than Low Voltage Protection limit.
- #define STATE_H_BRIDGE_FAULT 0x20000
  Signal from the driver that fault happened.
- #define STATE_DIG_SIGNAL 0xFFFF
  Flags of digital signals.
- #define STATE_RIGHT_EDGE 0x0001
  Engine stuck at the right edge.
- #define STATE_LEFT_EDGE 0x0002
  Engine stuck at the left edge.
- #define STATE_BUTTON_RIGHT 0x0004
  Button "right" state (1 if pressed).
- #define STATE_BUTTON_LEFT 0x0008
  Button "left" state (1 if pressed).
- #define STATE_GPIO_PINOUT 0x0010
  External GPIO works as Out, if flag set; otherwise works as In.
- #define STATE_GPIO_LEVEL 0x0020
  State of external GPIO pin.
- #define STATE_HALL_A 0x0040
  State of Hall_a pin.
- #define STATE_HALL_B 0x0080
  State of Hall_b pin.
- #define STATE_HALL_C 0x0100
  State of Hall_c pin.
- #define STATE_BRAKE 0x0200
  State of Brake pin.
- #define STATE_REV_SENSOR 0x0400
  State of Revolution sensor pin.
- #define STATE_SYNC_INPUT 0x0800

State of Sync input pin.

- #define STATE_SYNC_OUTPUT 0x1000

  State of Sync output pin.
- #define STATE_ENC_A 0x2000

  State of encoder A pin.
- #define STATE_ENC_B 0x4000

  State of encoder B pin.

Encoder state

Encoder state returned by device query.

See also

status_t::encsts
get_status
status_t::EncSts, get_status_impl

- #define ENC_STATE_ABSENT 0x00

  Encoder is absent.
- #define ENC_STATE_UNKNOWN 0x01

  Encoder state is unknown.
- #define ENC_STATE_MALFUNC 0x02

  Encoder is connected and malfunctioning.
- #define ENC_STATE_REVERS 0x03

  Encoder is connected and operational but counts in otyher direction.
- #define ENC_STATE_OK 0x04

  Encoder is connected and working properly.

Winding state

Motor winding state returned by device query.

See also

status_t::windsts
get_status
status_t::WindSts, get_status_impl

- #define WIND_A_STATE_ABSENT 0x00

  Winding A is disconnected.
- #define WIND_A_STATE_UNKNOWN 0x01

  Winding A state is unknown.
- #define WIND_A_STATE_MALFUNC 0x02

  Winding A is short-circuited.
- #define WIND_A_STATE_OK 0x03

  Winding A is connected and working properly.
- #define WIND_B_STATE_ABSENT 0x00

  Winding B is disconnected.
- #define WIND_B_STATE_UNKNOWN 0x10

  Winding B state is unknown.
- #define WIND_B_STATE_MALFUNC 0x20

  Winding B is short-circuited.
- #define WIND_B_STATE_OK 0x30

  Winding B is connected and working properly.

Move command state

Move command (command_move, command_movr, command_left, command_right, command_stop, command_home, command_loft, command_sstp) and its state (run, finished, error).

See also

status_t::mvcmdsts
get_status
status_t::MvCmdSts, *get_status_impl*

- #define MVCMD_NAME_BITS 0x3F
  Move command bit mask.
- #define MVCMD_UKNWN 0x00
  Unknown command.
- #define MVCMD_MOVE 0x01
  Command move.
- #define MVCMD_MOVR 0x02
  Command movr.
- #define MVCMD_LEFT 0x03
  Command left.
- #define MVCMD_RIGHT 0x04
  Command rigt.
- #define MVCMD_STOP 0x05
  Command stop.
- #define MVCMD_HOME 0x06
  Command home.
- #define MVCMD_LOFT 0x07
  Command loft.
- #define MVCMD_SSTP 0x08
  Command soft stop.
- #define MVCMD_ERROR 0x40
  Finish state (1 - move command have finished with an error, 0 - move command have finished correctly).
- #define MVCMD_RUNNING 0x80
  Move command state (0 - move command have finished, 1 - move command is being executed).

Flags of engine settings

Specify motor shaft movement algorithm and list of limitations. Flags returned by query of engine settings. May be combined with bitwise OR.

See also

engine_settings_t::flags
set_engine_settings
get_engine_settings
engine_settings_t::EngineFlags, *get_engine_settings*, *set_engine_settings*

- #define ENGINE_REVERSE 0x01
  Reverse flag.
- #define ENGINE_MAX_SPEED 0x04
  Max speed flag.
- #define ENGINE_ANTIPLAY 0x08
  Play compensation flag.
- #define ENGINE_ACCEL_ON 0x10
  Acceleration enable flag.
- #define ENGINE_LIMIT_VOLT 0x20
  Maxumum motor voltage limit enable flag(is only used with DC motor).
- #define ENGINE_LIMIT_CURR 0x40
  Maxumum motor current limit enable flag(is only used with DC motor).
- #define ENGINE_LIMIT_RPM 0x80
  Maxumum motor speed limit enable flag.

Flags of microstep mode

Specify settings of microstep mode. Using with step motors. Flags returned by query of engine settings. May be combined with bitwise OR

See also

engine_settings_t::flags
set_engine_settings
get_engine_settings
engine_settings_t::MicrostepMode, *get_engine_settings*, *set_engine_settings*

- #define MICROSTEP_MODE_FULL 0x01
  Full step mode.
- #define MICROSTEP_MODE_FRAC_2 0x02
  1/2 step mode.
- #define MICROSTEP_MODE_FRAC_4 0x03
  1/4 step mode.
- #define MICROSTEP_MODE_FRAC_8 0x04
  1/8 step mode.
- #define MICROSTEP_MODE_FRAC_16 0x05
  1/16 step mode.
- #define MICROSTEP_MODE_FRAC_32 0x06
  1/32 step mode.
- #define MICROSTEP_MODE_FRAC_64 0x07
  1/64 step mode.
- #define MICROSTEP_MODE_FRAC_128 0x08
  1/128 step mode.
- #define MICROSTEP_MODE_FRAC_256 0x09
  1/256 step mode.

Flags of engine type

Specify motor type. Flags returned by query of engine settings.

See also

engine_settings_t::flags
set_entype_settings
get_entype_settings
entype_settings_t::EngineType, *get_entype_settings*, *set_entype_settings*

- #define ENGINE_TYPE_NONE 0x00
  A value that shouldn't be used.
- #define ENGINE_TYPE_DC 0x01
  DC motor.
- #define ENGINE_TYPE_2DC 0x02
  2 DC motors.
- #define ENGINE_TYPE_STEP 0x03
  Step motor.
- #define ENGINE_TYPE_TEST 0x04
  Duty cycle are fixed.
- #define ENGINE_TYPE_BRUSHLESS 0x05
  Brushless motor.

Flags of driver type

Specify driver type. Flags returned by query of engine settings.

See also

engine_settings_t::flags
set_entype_settings
get_entype_settings
entype_settings_t::DriverType, *get_entype_settings*, *set_entype_settings*

- #define DRIVER_TYPE_DISCRETE_FET 0x01
  Driver with discrete FET keys.
- #define DRIVER_TYPE_INTEGRATE 0x02
  Driver with integrated IC.
- #define DRIVER_TYPE_EXTERNAL 0x03
  External driver.

Flags of power settings of stepper motor

Specify power settings. Flags returned by query of power settings.

See also

power_settings_t::flags
get_power_settings
set_power_settings
power_settings_t::PowerFlags, *get_power_settings*, *set_power_settings*

- #define POWER_REDUCT_ENABLED 0x01
  Current reduction enabled after CurrReductDelay, if this flag is set.
- #define POWER_OFF_ENABLED 0x02
  Power off enabled after PowerOffDelay, if this flag is set.
- #define POWER_SMOOTH_CURRENT 0x04
  Current ramp-up/down is performed smoothly during current_set_time, if this flag is set.

Flags of secure settings

Specify secure settings. Flags returned by query of secure settings.

See also

secure_settings_t::flags
get_secure_settings
set_secure_settings
secure_settings_t::Flags, *get_secure_settings*, *set_secure_settings*

- #define ALARM_ON_DRIVER_OVERHEATING 0x01
  If this flag is set enter Alarm state on driver overheat signal.
- #define LOW_UPWR_PROTECTION 0x02
  If this flag is set turn off motor when voltage is lower than LowUpwrOff.
- #define H_BRIDGE_ALERT 0x04
  If this flag is set then turn off the power unit with a signal problem in one of the transistor bridge.
- #define ALARM_ON_BORDERS_SWAP_MISSET 0x08
  If this flag is set enter Alarm state on borders swap misset.
- #define ALARM_FLAGS_STICKING 0x10
  If this flag is set only a STOP command can turn all alarms to 0.
- #define USB_BREAK_RECONNECT 0x20
  If this flag is set USB brake reconnect module will be enable.

Position setting flags

Flags used in setting of position.

See also

get_position
set_position
set_position_t::PosFlags, *set_position*

- #define SETPOS_IGNORE_POSITION 0x01
  Will not reload position in steps/microsteps if this flag is set.
- #define SETPOS_IGNORE_ENCODER 0x02
  Will not reload encoder state if this flag is set.

Feedback type.

See also

set_feedback_settings
get_feedback_settings
feedback_settings_t::FeedbackType, *get_feedback_settings*, *set_feedback_settings*

- #define FEEDBACK_ENCODER 0x01
  Feedback by encoder.
- #define FEEDBACK_ENCODERHALL 0x03
  Feedback by Hall detector.
- #define FEEDBACK_EMF 0x04
  Feedback by EMF.
- #define FEEDBACK_NONE 0x05
  Feedback is absent.

Describes feedback flags.

See also

set_feedback_settings
get_feedback_settings
feedback_settings_t::FeedbackFlags, *get_feedback_settings*, *set_feedback_settings*

- #define FEEDBACK_ENC_REVERSE 0x01
  Reverse count of encoder.
- #define FEEDBACK_HALL_REVERSE 0x02
  Reverce count position on the Hall sensor.

Flags for synchronization input setup

See also

sync_settings_t::syncin_flags
get_sync_settings
set_sync_settings
sync_in_settings_t::SyncInFlags, *get_sync_in_settings*, *set_sync_in_settings*

- #define SYNCIN_ENABLED 0x01
  Synchronization in mode is enabled, if this flag is set.
- #define SYNCIN_INVERT 0x02
  Trigger on falling edge if flag is set, on rising edge otherwise.
- #define SYNCIN_GOTOPOSITION 0x04
  The engine is go to position specified in Position and uPosition, if this flag is set.

Flags of synchronization output

See also

sync_settings_t::syncout_flags
get_sync_settings
set_sync_settings
sync_out_settings_t::SyncOutFlags, get_sync_out_settings, set_sync_out_settings

- #define SYNCOUT_ENABLED 0x01
  Synchronization out pin follows the synchronization logic, if set.
- #define SYNCOUT_STATE 0x02
  When output state is fixed by negative SYNCOUT_ENABLED flag, the pin state is in accordance with this flag state.
- #define SYNCOUT_INVERT 0x04
  Low level is active, if set, and high level is active otherwise.
- #define SYNCOUT_IN_STEPS 0x08
  Use motor steps/encoder pulses instead of milliseconds for output pulse generation if the flag is set.
- #define SYNCOUT_ONSTART 0x10
  Generate synchronization pulse when movement starts.
- #define SYNCOUT_ONSTOP 0x20
  Generate synchronization pulse when movement stops.
- #define SYNCOUT_ONPERIOD 0x40
  Generate synchronization pulse every SyncOutPeriod encoder pulses.

External IO setup flags

See also

extio_settings_t::setup_flags
get_extio_settings
set_extio_settings
extio_settings_t::EXTIOSetupFlags, get_extio_settings, set_extio_settings

- #define EXTIO_SETUP_OUTPUT 0x01
  EXTIO works as output if flag is set, works as input otherwise.
- #define EXTIO_SETUP_INVERT 0x02
  Interpret EXTIO states and fronts inverted if flag is set.

External IO mode flags

See also

extio_settings_t::extio_mode_flags
get_extio_settings
set_extio_settings
extio_settings_t::EXTIOModeFlags, get_extio_settings, set_extio_settings

- #define EXTIO_SETUP_MODE_IN_NOP 0x00
  Do nothing.
- #define EXTIO_SETUP_MODE_IN_STOP 0x01
  Issue STOP command, ceasing the engine movement.
- #define EXTIO_SETUP_MODE_IN_PWOF 0x02
  Issue PWOF command, powering off all engine windings.
- #define EXTIO_SETUP_MODE_IN_MOVR 0x03
  Issue MOVR command with last used settings.
- #define EXTIO_SETUP_MODE_IN_HOME 0x04
  Issue HOME command.
- #define EXTIO_SETUP_MODE_OUT_OFF 0x00
  EXTIO pin always set in inactive state.
- #define EXTIO_SETUP_MODE_OUT_ON 0x10

EXTIO pin always set in active state.

- #define EXTIO_SETUP_MODE_OUT_MOVING 0x20
  EXTIO pin stays active during moving state.
- #define EXTIO_SETUP_MODE_OUT_ALARM 0x30
  EXTIO pin stays active during Alarm state.
- #define EXTIO_SETUP_MODE_OUT_MOTOR_ON 0x40
  EXTIO pin stays active when windings are powered.
- #define EXTIO_SETUP_MODE_OUT_MOTOR_FOUND 0x50
  EXTIO pin stays active when motor is connected (first winding).

Border flags

Specify types of borders and motor behaviour on borders. May be combined with bitwise OR.

See also

get_edges_settings
set_edges_settings
edges_settings_t::BorderFlags, get_edges_settings, set_edges_settings

- #define BORDER_IS_ENCODER 0x01
  Borders are fixed by predetermined encoder values, if set; borders position on limit switches, if not set.
- #define BORDER_STOP_LEFT 0x02
  Motor should stop on left border.
- #define BORDER_STOP_RIGHT 0x04
  Motor should stop on right border.
- #define BORDERS_SWAP_MISSET_DETECTION 0x08
  Motor should stop on both borders.

Limit switches flags

Specify electrical behaviour of limit switches like order and pulled positions. May be combined with bitwise OR.

See also

get_edges_settings
set_edges_settings
edges_settings_t::EnderFlags, get_edges_settings, set_edges_settings

- #define ENDER_SWAP 0x01
  First limit switch on the right side, if set; otherwise on the left side.
- #define ENDER_SW1_ACTIVE_LOW 0x02
  1 - Limit switch connnected to pin SW1 is triggered by a low level on pin.
- #define ENDER_SW2_ACTIVE_LOW 0x04
  1 - Limit switch connnected to pin SW2 is triggered by a low level on pin.

Brake settings flags

Specify behaviour of brake. May be combined with bitwise OR.

See also

get_brake_settings
set_brake_settings
brake_settings_t::BrakeFlags, get_brake_settings, set_brake_settings

- #define BRAKE_ENABLED 0x01
  Brake control is enabled, if this flag is set.
- #define BRAKE_ENG_PWROFF 0x02
  Brake turns off power of step motor, if this flag is set.

Control flags

Specify motor control settings by joystick or buttons. May be combined with bitwise OR.

See also

get_control_settings
set_control_settings
control_settings_t::Flags, *get_control_settings*, *set_control_settings*

- #define CONTROL_MODE_BITS 0x03
  Bits to control engine by joystick or buttons.
- #define CONTROL_MODE_OFF 0x00
  Control is disabled.
- #define CONTROL_MODE_JOY 0x01
  Control by joystick.
- #define CONTROL_MODE_LR 0x02
  Control by left/right buttons.
- #define CONTROL_BTN_LEFT_PUSHED_OPEN 0x04
  Pushed left button corresponds to open contact, if this flag is set.
- #define CONTROL_BTN_RIGHT_PUSHED_OPEN 0x08
  Pushed right button corresponds to open contact, if this flag is set.

Joystick flags

Control joystick states.

See also

set_joystick_settings
get_joystick_settings
joystick_settings_t::JoyFlags, *get_joystick_settings*, *set_joystick_settings*

- #define JOY_REVERSE 0x01
  Joystick action is reversed.

Position control flags

Specify settings of position control. May be combined with bitwise OR.

See also

get_ctp_settings
set_ctp_settings
ctp_settings_t::CTPFlags, *get_ctp_settings*, *set_ctp_settings*

- #define CTP_ENABLED 0x01
  Position control is enabled, if flag set.
- #define CTP_BASE 0x02
  Position control is based on revolution sensor, if this flag is set; otherwise it is based on encoder.
- #define CTP_ALARM_ON_ERROR 0x04
  Set ALARM on mismatch, if flag set.
- #define REV_SENS_INV 0x08
  Sensor is active when it 0 and invert makes active level 1.

Home settings flags

Specify behaviour for home command. May be combined with bitwise OR.

See also

get_home_setting s
set_home_settings
command_home
home_settings_t::HomeFlags, *get_home_settings*, *set_home_settings*

- #define HOME_DIR_FIRST 0x01

Flag defines direction of 1st motion after execution of home command.

- #define HOME_DIR_SECOND 0x02
  Flag defines direction of 2nd motion.
- #define HOME_MV_SEC_EN 0x04
  Use the second phase of calibration to the home position, if set; otherwise the second phase is skipped.
- #define HOME_HALF_MV 0x08
  If the flag is set, the stop signals are ignored in start of second movement the first half-turn.
- #define HOME_STOP_FIRST_BITS 0x30
  Bits of the first stop selector.
- #define HOME_STOP_FIRST_REV 0x10
  First motion stops by revolution sensor.
- #define HOME_STOP_FIRST_SYN 0x20
  First motion stops by synchronization input.
- #define HOME_STOP_FIRST_LIM 0x30
  First motion stops by limit switch.
- #define HOME_STOP_SECOND_BITS 0xC0
  Bits of the second stop selector.
- #define HOME_STOP_SECOND_REV 0x40
  Second motion stops by revolution sensor.
- #define HOME_STOP_SECOND_SYN 0x80
  Second motion stops by synchronization input.
- #define HOME_STOP_SECOND_LIM 0xC0
  Second motion stops by limit switch.

UART parity flags

See also

uart_settings_t::UARTSetupFlags, get_uart_settings, set_uart_settings

- #define UART_PARITY_BITS 0x03
  Bits of the parity.
- #define UART_PARITY_BIT_EVEN 0x00
  Parity bit 1, if even.
- #define UART_PARITY_BIT_ODD 0x01
  Parity bit 1, if odd.
- #define UART_PARITY_BIT_SPACE 0x02
  Parity bit always 0.
- #define UART_PARITY_BIT_MARK 0x03
  Parity bit always 1.
- #define UART_PARITY_BIT_USE 0x04
  None parity.
- #define UART_STOP_BIT 0x08
  If set - one stop bit, else two stop bit.

Motor Type flags

See also

motor_settings_t::MotorType, get_motor_settings, set_motor_settings

- #define MOTOR_TYPE_STEP 0x01
  Step engine.
- #define MOTOR_TYPE_DC 0x02
  DC engine.
- #define MOTOR_TYPE_BLDC 0x03
  BLDC engine.

Encoder settings flags

See also

encoder_settings_t::EncoderSettings, *get_encoder_settings*, *set_encoder_settings*

- #define ENCSET_DIFFERENTIAL_OUTPUT 0x001
  If flag is set the encoder has differential output, else single ended output.
- #define ENCSET_PUSHPULL_OUTPUT 0x004
  If flag is set the encoder has push-pull output, else open drain output.
- #define ENCSET_INDEXCHANNEL_PRESENT 0x010
  If flag is set the encoder has index channel, else encoder hasn't it.
- #define ENCSET_REVOLUTIONSENSOR_PRESENT 0x040
  If flag is set the encoder has revolution sensor, else encoder hasn't it.
- #define ENCSET_REVOLUTIONSENSOR_ACTIVE_HIGH 0x100
  If flag is set the revolution sensor active state is high logic state, else active state is low logic state.

Magnetic brake settings flags

See also

accessories_settings_t::MBSettings, *get_accessories_settings*, *set_accessories_settings*

- #define MB_AVAILABLE 0x01
  If flag is set the magnetic brake is available.
- #define MB_POWERED_HOLD 0x02
  If this flag is set the magnetic brake is on when powered.

Temperature sensor settings flags

See also

accessories_settings_t::LimitSwitchesSettings, *get_accessories_settings*, *set_accessories_settings*

- #define TS_TYPE_BITS 0x07
  Bits of the temperature sensor type.
- #define TS_TYPE_THERMOCOUPLE 0x01
  Thermocouple.
- #define TS_TYPE_SEMICONDUCTOR 0x02
  The semiconductor temperature sensor.
- #define TS_AVAILABLE 0x08
  If flag is set the temperature sensor is available.
- #define LS_ON_SW1_AVAILABLE 0x01
  If flag is set the limit switch connnected to pin SW1 is available.
- #define LS_ON_SW2_AVAILABLE 0x02
  If flag is set the limit switch connnected to pin SW2 is available.
- #define LS_SW1_ACTIVE_LOW 0x04
  If flag is set the limit switch connnected to pin SW1 is triggered by a low level on pin.
- #define LS_SW2_ACTIVE_LOW 0x08
  If flag is set the limit switch connnected to pin SW2 is triggered by a low level on pin.
- #define LS_SHORTED 0x10
  If flag is set the Limit switches is shorted.

Typedefs

- typedef int device_t
  Type describes device identifier.
- typedef int result_t
  Type specifies result of any operation.
- typedef uint32_t device_enumeration_t
  TODO.
- typedef struct calibration_t calibration_t
  Calibration companion structure TODO docme.

Functions

Controller settings setup

Functions for adjusting engine read/write almost all controller settings.

- result_t XIMC_API set_feedback_settings (device_t id, const feedback_settings_t *feedback_settings)
  Set feedback settings.
- result_t XIMC_API get_feedback_settings (device_t id, feedback_settings_t *feedback_settings)
  Read feedback settings.
- result_t XIMC_API set_home_settings (device_t id, const home_settings_t *home_settings)
  Set home settings.
- result_t XIMC_API **set_home_settings_calb** (device_t id, const home_settings_calb_t *home_settings_calb, const calibration_t *calibration)
- result_t XIMC_API get_home_settings (device_t id, home_settings_t *home_settings)
  Read home settings.
- result_t XIMC_API **get_home_settings_calb** (device_t id, home_settings_calb_t *home_settings_calb, const calibration_t *calibration)
- result_t XIMC_API set_move_settings (device_t id, const move_settings_t *move_settings)
  Set command setup movement (speed, acceleration, threshold and etc).
- result_t XIMC_API **set_move_settings_calb** (device_t id, const move_settings_calb_t *move_settings_calb, const calibration_t *calibration)
- result_t XIMC_API get_move_settings (device_t id, move_settings_t *move_settings)
  Read command setup movement (speed, acceleration, threshold and etc).
- result_t XIMC_API **get_move_settings_calb** (device_t id, move_settings_calb_t *move_settings_calb, const calibration_t *calibration)
- result_t XIMC_API set_engine_settings (device_t id, const engine_settings_t *engine_settings)
  Set engine settings.
- result_t XIMC_API **set_engine_settings_calb** (device_t id, const engine_settings_calb_t *engine_settings_calb, const calibration_t *calibration)
- result_t XIMC_API get_engine_settings (device_t id, engine_settings_t *engine_settings)
  Read engine settings.
- result_t XIMC_API **get_engine_settings_calb** (device_t id, engine_settings_calb_t *engine_settings_calb, const calibration_t *calibration)
- result_t XIMC_API set_entype_settings (device_t id, const entype_settings_t *entype_settings)
  Set engine type and driver type.
- result_t XIMC_API get_entype_settings (device_t id, entype_settings_t *entype_settings)
  Return engine type and driver type.
- result_t XIMC_API set_power_settings (device_t id, const power_settings_t *power_settings)
  Set settings of step motor power control.
- result_t XIMC_API get_power_settings (device_t id, power_settings_t *power_settings)
  Read settings of step motor power control.
- result_t XIMC_API set_secure_settings (device_t id, const secure_settings_t *secure_settings)
  Set protection settings.
- result_t XIMC_API get_secure_settings (device_t id, secure_settings_t *secure_settings)
  Read protection settings.
- result_t XIMC_API set_edges_settings (device_t id, const edges_settings_t *edges_settings)
  Set border and limit switches settings.
- result_t XIMC_API **set_edges_settings_calb** (device_t id, const edges_settings_calb_t *edges_settings_calb, const calibration_t *calibration)
- result_t XIMC_API get_edges_settings (device_t id, edges_settings_t *edges_settings)
  Read border and limit switches settings.
- result_t XIMC_API **get_edges_settings_calb** (device_t id, edges_settings_calb_t *edges_settings_calb, const calibration_t *calibration)
- result_t XIMC_API set_pid_settings (device_t id, const pid_settings_t *pid_settings)
  Set PID settings.
- result_t XIMC_API get_pid_settings (device_t id, pid_settings_t *pid_settings)
  Read PID settings.
- result_t XIMC_API set_sync_in_settings (device_t id, const sync_in_settings_t *sync_in_settings)
  Set input synchronization settings.

- result_t XIMC_API **set_sync_in_settings_calb** (device_t id, const sync_in_settings_calb_t *sync_in_settings_calb, const calibration_t *calibration)
- result_t XIMC_API get_sync_in_settings (device_t id, sync_in_settings_t *sync_in_settings)
  Read input synchronization settings.
- result_t XIMC_API **get_sync_in_settings_calb** (device_t id, sync_in_settings_calb_t *sync_in_settings_calb, const calibration_t *calibration)
- result_t XIMC_API set_sync_out_settings (device_t id, const sync_out_settings_t *sync_out_settings)
  Set output synchronization settings.
- result_t XIMC_API **set_sync_out_settings_calb** (device_t id, const sync_out_settings_calb_t *sync_out_settings_calb, const calibration_t *calibration)
- result_t XIMC_API get_sync_out_settings (device_t id, sync_out_settings_t *sync_out_settings)
  Read output synchronization settings.
- result_t XIMC_API **get_sync_out_settings_calb** (device_t id, sync_out_settings_calb_t *sync_out_settings_calb, const calibration_t *calibration)
- result_t XIMC_API set_extio_settings (device_t id, const extio_settings_t *extio_settings)
  Set EXTIO settings.
- result_t XIMC_API get_extio_settings (device_t id, extio_settings_t *extio_settings)
  Read EXTIO settings.
- result_t XIMC_API set_brake_settings (device_t id, const brake_settings_t *brake_settings)
  Set settings of brake control.
- result_t XIMC_API get_brake_settings (device_t id, brake_settings_t *brake_settings)
  Read settings of brake control.
- result_t XIMC_API set_control_settings (device_t id, const control_settings_t *control_settings)
  Set settings of motor control.
- result_t XIMC_API **set_control_settings_calb** (device_t id, const control_settings_calb_t *control_settings_calb, const calibration_t *calibration)
- result_t XIMC_API get_control_settings (device_t id, control_settings_t *control_settings)
  Read settings of motor control.
- result_t XIMC_API **get_control_settings_calb** (device_t id, control_settings_calb_t *control_settings_calb, const calibration_t *calibration)
- result_t XIMC_API set_joystick_settings (device_t id, const joystick_settings_t *joystick_settings)
  Set settings of joystick.
- result_t XIMC_API get_joystick_settings (device_t id, joystick_settings_t *joystick_settings)
  Read settings of joystick.
- result_t XIMC_API set_ctp_settings (device_t id, const ctp_settings_t *ctp_settings)
  Set settings of control position(is only used with stepper motor).
- result_t XIMC_API get_ctp_settings (device_t id, ctp_settings_t *ctp_settings)
  Read settings of control position(is only used with stepper motor).
- result_t XIMC_API set_uart_settings (device_t id, const uart_settings_t *uart_settings)
  Set UART settings.
- result_t XIMC_API get_uart_settings (device_t id, uart_settings_t *uart_settings)
  Read UART settings.
- result_t XIMC_API set_controller_name (device_t id, const controller_name_t *controller_name)
  Write user controller name and flags of setting from FRAM.
- result_t XIMC_API get_controller_name (device_t id, controller_name_t *controller_name)
  Read user controller name and flags of setting from FRAM.

Group of commands movement control

- result_t XIMC_API command_stop (device_t id)
  Immediately stop the engine, the transition to the STOP, mode key BREAK (winding short-circuited), the regime "retention" is deactivated for DC motors, keeping current in the windings for stepper motors (with Power management settings).
- result_t XIMC_API set_add_sync_in_action (device_t id, const add_sync_in_action_t *add_sync_in_action)
  This command adds one element of the FIFO commands that are executed when input clock pulse.
- result_t XIMC_API **set_add_sync_in_action_calb** (device_t id, const add_sync_in_action_calb_t *add_sync_in_action_calb, const calibration_t *calibration)
- result_t XIMC_API command_power_off (device_t id)

Immediately power off motor regardless its state.

- result_t XIMC_API command_move (device_t id, int Position, int uPosition)

  Upon receiving the command "move" the engine starts to move with pre-set parameters (speed, acceleration, retention), to the point specified to the Position, uPosition.
- result_t XIMC_API **command_move_calb** (device_t id, float Position, const calibration_t *calibration)
- result_t XIMC_API command_movr (device_t id, int DeltaPosition, int uDeltaPosition)

  Upon receiving the command "movr" engine starts to move with pre-set parameters (speed, acceleration, hold), left or right (depending on the sign of DeltaPosition) by the number of pulses specified in the fields DeltaPosition, uDeltaPosition.
- result_t XIMC_API **command_movr_calb** (device_t id, float DeltaPosition, const calibration_t *calibration)
- result_t XIMC_API command_home (device_t id)

  The positive direction is to the right.
- result_t XIMC_API command_left (device_t id)

  Start continous moving to the left.
- result_t XIMC_API command_right (device_t id)

  Start continous moving to the right.
- result_t XIMC_API command_loft (device_t id)

  Upon receiving the command "loft" the engine is shifted from the current point to a distance GENG :: Antiplay, then move to the same point.
- result_t XIMC_API command_sstp (device_t id)

  soft stop engine.
- result_t XIMC_API get_position (device_t id, get_position_t *the_get_position)

  Reads the value position in steps and micro for stepper motor and encoder steps all engines.
- result_t XIMC_API **get_position_calb** (device_t id, get_position_calb_t *the_get_position_calb, const calibration_t *calibration)
- result_t XIMC_API set_position (device_t id, const set_position_t *the_set_position)

  Sets any position value in steps and micro for stepper motor and encoder steps of all engines.
- result_t XIMC_API **set_position_calb** (device_t id, const set_position_calb_t *the_set_position_calb, const calibration_t *calibration)
- result_t XIMC_API command_zero (device_t id)

  Sets the current position and the position in which the traffic moves by the move command and movr zero for all cases, except for movement to the target position.

Group of commands to save and load settings

- result_t XIMC_API command_save_settings (device_t id)

  Save all settings from controller's RAM to controller's flash memory, replacing previous data in controller's flash memory.
- result_t XIMC_API command_read_settings (device_t id)

  Read all settings from controller's flash memory to controller's RAM, replacing previous data in controller's RAM.
- result_t XIMC_API command_eesave_settings (device_t id)

  Save settings from controller's RAM to stage's EEPROM memory, whitch spontaneity connected to stage and it isn't change without it mechanical reconstruction.
- result_t XIMC_API command_eeread_settings (device_t id)

  Read settings from controller's RAM to stage's EEPROM memory, whitch spontaneity connected to stage and it isn't change without it mechanical reconstruction.
- result_t XIMC_API get_chart_data (device_t id, chart_data_t *chart_data)

  Return device electrical parameters, useful for charts.
- result_t XIMC_API get_serial_number (device_t id, unsigned int *SerialNumber)

  Read device serial number.
- result_t XIMC_API get_firmware_version (device_t id, unsigned int *Major, unsigned int *Minor, unsigned int *Release)

  Read controller's firmware version.
- result_t XIMC_API service_command_updf (device_t id)

  Command puts the controller to update the firmware.

Service commands

- result_t XIMC_API set_serial_number (device_t id, const serial_number_t *serial_number)
  Write device serial number to controller's flash memory.
- result_t XIMC_API get_analog_data (device_t id, analog_data_t *analog_data)
  Read analog data structure that contains raw analog data from ADC embedded on board.
- result_t XIMC_API get_debug_read (device_t id, debug_read_t *debug_read)
  Read data from firmware for debug purpose.

Group of commands to work with EEPROM

- result_t XIMC_API set_stage_name (device_t id, const stage_name_t *stage_name)
  Write user stage name from EEPROM.
- result_t XIMC_API get_stage_name (device_t id, stage_name_t *stage_name)
  Read user stage name from EEPROM.
- result_t XIMC_API set_stage_information (device_t id, const stage_information_t *stage_information)
  Set stage information to EEPROM.
- result_t XIMC_API get_stage_information (device_t id, stage_information_t *stage_information)
  Read stage information from EEPROM.
- result_t XIMC_API set_stage_settings (device_t id, const stage_settings_t *stage_settings)
  Set stage settings to EEPROM.
- result_t XIMC_API get_stage_settings (device_t id, stage_settings_t *stage_settings)
  Read stage settings from EEPROM.
- result_t XIMC_API set_motor_information (device_t id, const motor_information_t *motor_information)
  Set motor information to EEPROM.
- result_t XIMC_API get_motor_information (device_t id, motor_information_t *motor_information)
  Read motor information from EEPROM.
- result_t XIMC_API set_motor_settings (device_t id, const motor_settings_t *motor_settings)
  Set motor settings to EEPROM.
- result_t XIMC_API get_motor_settings (device_t id, motor_settings_t *motor_settings)
  Read motor settings from EEPROM.
- result_t XIMC_API set_encoder_information (device_t id, const encoder_information_t *encoder_information)
  Set encoder information to EEPROM.
- result_t XIMC_API get_encoder_information (device_t id, encoder_information_t *encoder_information)
  Read encoder information from EEPROM.
- result_t XIMC_API set_encoder_settings (device_t id, const encoder_settings_t *encoder_settings)
  Set encoder settings to EEPROM.
- result_t XIMC_API get_encoder_settings (device_t id, encoder_settings_t *encoder_settings)
  Read encoder settings from EEPROM.
- result_t XIMC_API set_hallsensor_information (device_t id, const hallsensor_information_t *hallsensor_information)
  Set hall sensor information to EEPROM.
- result_t XIMC_API get_hallsensor_information (device_t id, hallsensor_information_t *hallsensor_information)
  Read hall sensor information from EEPROM.
- result_t XIMC_API set_hallsensor_settings (device_t id, const hallsensor_settings_t *hallsensor_settings)
  Set hall sensor settings to EEPROM.
- result_t XIMC_API get_hallsensor_settings (device_t id, hallsensor_settings_t *hallsensor_settings)
  Read hall sensor settings from EEPROM.
- result_t XIMC_API set_gear_information (device_t id, const gear_information_t *gear_information)
  Set gear information to EEPROM.
- result_t XIMC_API get_gear_information (device_t id, gear_information_t *gear_information)
  Read gear information from EEPROM.
- result_t XIMC_API set_gear_settings (device_t id, const gear_settings_t *gear_settings)
  Set gear settings to EEPROM.
- result_t XIMC_API get_gear_settings (device_t id, gear_settings_t *gear_settings)

Read gear settings from EEPROM.

- result_t XIMC_API set_accessories_settings (device_t id, const accessories_settings_t *accessories_settings)

  Set additional accessories information to EEPROM.
- result_t XIMC_API get_accessories_settings (device_t id, accessories_settings_t *accessories_settings)

  Read additional accessories information from EEPROM.
- result_t XIMC_API get_bootloader_version (device_t id, unsigned int *Major, unsigned int *Minor, unsigned int *Release)

  Read controller's firmware version.
- result_t XIMC_API goto_firmware (device_t id, uint8_t *ret)

  TODO Check for firmware on device.
- result_t XIMC_API has_firmware (const char *name, uint8_t *ret)

  Check for firmware on device.
- result_t XIMC_API command_update_firmware (const char *name, const uint8_t *data, uint32_t data_size)

  Update firmware.
- result_t XIMC_API write_key (const char *name, uint8_t *key)

  Write controller key.
- result_t XIMC_API command_reset (device_t id)

  Reset controller.
- result_t XIMC_API command_clear_fram (device_t id)

  Clear controller FRAM.

Boards and drivers control

Functions for searching and opening/closing devices

- typedef char * pchar

  Nevermind.
- typedef void(XIMC_CALLCONV * logging_callback_t)(int loglevel, const wchar_t *message)

  Logging callback prototype.
- device_t XIMC_API open_device (const char *name)

  Open a device with OS name name and return identifier of the device which can be used in calls.
- result_t XIMC_API close_device (device_t *id)

  Close specified device.
- result_t XIMC_API probe_device (const char *name)

  Check if a device with OS name name is XIMC device.
- device_enumeration_t XIMC_API enumerate_devices (int probe_flags)

  Enumerate all devices that looks like valid.
- result_t XIMC_API free_enumerate_devices (device_enumeration_t device_enumeration)

  Free memory returned by enumerate_devices.
- int XIMC_API get_device_count (device_enumeration_t device_enumeration)

  Get device count.
- pchar XIMC_API get_device_name (device_enumeration_t device_enumeration, int device_index)

  Get device name from the device enumeration.
- result_t XIMC_API get_enumerate_device_serial (device_enumeration_t device_enumeration, int device_index, uint32_t *serial)

  Get device serial number from the device enumeration.
- result_t XIMC_API get_enumerate_device_information (device_enumeration_t device_enumeration, int device_index, device_information_t *device_information)

  Get device information from the device enumeration.
- result_t XIMC_API reset_locks ()

  Reset library locks in a case of deadlock.
- result_t XIMC_API ximc_fix_usbser_sys (const char *device_name)

  Fix for errors in Windows USB driver stack.

- void XIMC_API msec_sleep (unsigned int msec)

  Sleeps for a specified amount of time.
- void XIMC_API ximc_version (char *version)

  Returns a library version.
- void XIMC_API logging_callback_stderr_wide (int loglevel, const wchar_t *message)

  Simple callback for logging to stderr in wide chars.
- void XIMC_API logging_callback_stderr_narrow (int loglevel, const wchar_t *message)

  Simple callback for logging to stderr in narrow (single byte) chars.
- void XIMC_API set_logging_callback (logging_callback_t logging_callback)

  Sets a logging callback.
- result_t XIMC_API get_status (device_t id, status_t *status)

  Return device state.
- result_t XIMC_API get_status_calb (device_t id, status_calb_t *status, const calibration_t *calibration)

  TODO document me Useful structure that contains current controller status, including speed, position and boolean flags.
- result_t XIMC_API get_device_information (device_t id, device_information_t *device_information)

  Return device information.

5.1.1 Detailed Description

Header file for libximc library.

5.1.2 Macro Definition Documentation

5.1.2.1 #define BORDERS_SWAP_MISSET_DETECTION 0x08

Motor should stop on both borders.

Need to save motor then wrong border settings is set

5.1.2.2 #define DRIVER_TYPE_DISCRETE_FET 0x01

Driver with discrete FET keys.

Default option.

5.1.2.3 #define ENGINE_ACCEL_ON 0x10

Acceleration enable flag.

If it set, motion begins with acceleration and ends with deceleration.

5.1.2.4 #define ENGINE_ANTIPLAY 0x08

Play compensation flag.

If it set, engine makes backlash (play) compensation procedure and reach the predetermined position accurately on low speed.

5.1.2.5 #define ENGINE_MAX_SPEED 0x04

Max speed flag.

If it is set, engine uses maxumum speed achievable with the present engine settings as nominal speed.

5.1.2.6 #define ENGINE_REVERSE 0x01

Reverse flag.

It determines motor shaft rotation direction that corresponds to feedback counts increasing. If not set (default), motor shaft rotation direction under positive voltage corresponds to feedback counts increasing and vice versa. Change it if you see that positive directions on motor and feedback are opposite.

5.1.2.7 #define ENGINE_TYPE_TEST 0x04

Duty cycle are fixed.

Used only manufacturer.

5.1.2.8 #define ENUMERATE_PROBE 0x01

Check if a device with OS name name is XIMC device.

Be carefuly with this flag because it sends some data to the device.

5.1.2.9 #define EXTIO_SETUP_INVERT 0x02

Interpret EXTIO states and fronts inverted if flag is set.

Falling front as input event and low logic level as active state.

5.1.2.10 #define HOME_DIR_FIRST 0x01

Flag defines direction of 1st motion after execution of home command.

Direction is right, if set; otherwise left.

5.1.2.11 #define HOME_DIR_SECOND 0x02

Flag defines direction of 2nd motion.

Direction is right, if set; otherwise left.

5.1.2.12 #define JOY_REVERSE 0x01

Joystick action is reversed.

Joystick deviation to the upper values correspond to negative speeds and vice versa.

5.1.2.13 #define MVCMD_ERROR 0x40

Finish state (1 - move command have finished with an error, 0 - move command have finished correctly).

This flags is actual when MVCMD_RUNNING signals movement finish.

5.1.2.14 #define REV_SENS_INV 0x08

Sensor is active when it 0 and invert makes active level 1.

That is, if you do not invert, it is normal logic - 0 is the activation.

5.1.2.15 #define STATE_ALARM 0x00040

Controller is in alarm state indicating that something dangerous had happened.

Most commands are ignored in this state. To reset the flag a STOP command must be issued.

5.1.2.16 #define SYNCIN_GOTOPOSITION 0x04

The engine is go to position specified in Position and uPosition, if this flag is set.

And it is shift on the Position and uPosition, if this flag is unset

5.1.2.17 #define SYNCOUT_ENABLED 0x01

Synchronization out pin follows the synchronization logic, if set.

It governed by SYNCOUT_STATE flag otherwise.

5.1.2.18 #define XIMC_API

Library import macro Macros allows to automatically import function from shared library.

It automatically expands to dllimport on msvc when including header file

5.1.3 Typedef Documentation

5.1.3.1 typedef void(**XIMC_CALLCONV** * logging_callback_t)(int loglevel, const wchar_t *message)

Logging callback prototype.

Parameters

loglevel	a loglevel
message	a message

5.1.4 Function Documentation

5.1.4.1 **result_t XIMC_API** close_device (**device_t** * id)

Close specified device.

Parameters

id	an identifier of device

5.1.4.2 **result_t XIMC_API** command_clear_fram (**device_t** id)

Clear controller FRAM.

Can be used by manufacturer only

Parameters

id	an identifier of device

5.1.4.3 result_t XIMC_API command_eeread_settings (device_t id)

Read settings from controller's RAM to stage's EEPROM memory, whitch spontaneity connected to stage and it isn't change without it mechanical reconstruction.

Parameters

id	an identifier of device

5.1.4.4 result_t XIMC_API command_eesave_settings (device_t id)

Save settings from controller's RAM to stage's EEPROM memory, whitch spontaneity connected to stage and it isn't change without it mechanical reconstruction.

Can be used by manufacturer only.

Parameters

id	an identifier of device

5.1.4.5 result_t XIMC_API command_home (device_t id)

The positive direction is to the right.

A value of zero reverses the direction of the direction of the flag, the set speed. Restriction imposed by the trailer, act the same, except that the limit switch contact does not stop. Limit the maximum speed, acceleration and deceleration function. 1) moves the motor according to the speed FastHome, uFastHome and flag HOME_DIR_FAST until limit switch, if the flag is set HOME_STOP_ENDS, until the signal from the input synchronization if the flag HOME_STOP_SYNC (as accurately as possible is important to catch the moment of operation limit switch) or until the signal is received from the speed sensor, if the flag HOME_STOP_REV_SN 2) then moves according to the speed SlowHome, uSlowHome and flag HOME_DIR_SLOW until signal from the clock input, if the flag HOME_MV_SEC. If the flag HOME_MV_SEC reset skip this paragraph. 3) then move the motor according to the speed FastHome, uFastHome and flag HOME_DIR_SLOW a distance HomeDelta, uHomeDelta. description of flags and variable see in description for commands GHOM/SHOM

Parameters

id	an identifier of device

See also

home_settings_t
get_home_settings
set_home_settings

5.1.4.6 result_t XIMC_API command_left (device_t id)

Start continous moving to the left.

Parameters

id	an identifier of device

5.1.4.7 result_t XIMC_API command_loft (device_t id)

Upon receiving the command ”loft” the engine is shifted from the current point to a distance GENG :: Antiplay, then move to the same point.

Parameters

id	an identifier of device

5.1.4.8 result_t XIMC_API command_move (device_t id, int Position, int uPosition)

Upon receiving the command ”move” the engine starts to move with pre-set parameters (speed, acceleration, retention), to the point specified to the Position, uPosition.

For stepper motor uPosition sets the microstep for DC motor, this field is not used.

Parameters

Position	position to move. Range: -2147483647..2147483647.
uPosition	part of the position to move, microsteps. Range: -255..255.
id	an identifier of device

5.1.4.9 result_t XIMC_API command_movr (device_t id, int DeltaPosition, int uDeltaPosition)

Upon receiving the command ”movr” engine starts to move with pre-set parameters (speed, acceleration, hold), left or right (depending on the sign of DeltaPosition) by the number of pulses specified in the fields DeltaPosition, uDeltaPosition.

For stepper motor uDeltaPosition sets the microstep for DC motor, this field is not used.

Parameters

DeltaPosition	shift from initial position. Range: -2147483647..2147483647.
uDeltaPosition	part of the offset shift, microsteps. Range: -255..255.
id	an identifier of device

5.1.4.10 result_t XIMC_API command_power_off (device_t id)

Immediately power off motor regardless its state.

Shouldn’t be used during motion as the motor could be power on again automatically to continue movement. The command is designed for manual motor power off. When automatic power off after stop is required, use power management system.

Parameters

id	an identifier of device

See also

get_power_settings
set_power_settings

5.1.4.11 result_t XIMC_API command_read_settings (device_t id)

Read all settings from controller’s flash memory to controller’s RAM, replacing previous data in controller’s RAM.

Parameters

id	an identifier of device

5.1.4.12 **result_t XIMC_API** command_reset (**device_t** id)

Reset controller.

Can be used by manufacturer only

Parameters

id	an identifier of device

5.1.4.13 **result_t XIMC_API** command_right (**device_t** id)

Start continous moving to the right.

Parameters

id	an identifier of device

5.1.4.14 **result_t XIMC_API** command_save_settings (**device_t** id)

Save all settings from controller's RAM to controller's flash memory, replacing previous data in controller's flash memory.

Parameters

id	an identifier of device

5.1.4.15 **result_t XIMC_API** command_sstp (**device_t** id)

soft stop engine.

The motor stops with deceleration speed.

Parameters

id	an identifier of device

5.1.4.16 **result_t XIMC_API** command_stop (**device_t** id)

Immediately stop the engine, the transition to the STOP, mode key BREAK (winding short-circuited), the regime "retention" is deactivated for DC motors, keeping current in the windings for stepper motors (with Power management settings).

Parameters

id	an identifier of device

5.1.4.17 **result_t XIMC_API** command_update_firmware (const char * name, const uint8_t * data, uint32_t data_size)

Update firmware.

Service command

Parameters

name	a name of device
data	firmware byte stream
data_size	size of byte stream

5.1.4.18 **result_t XIMC_API** command_zero (**device_t** id)

Sets the current position and the position in which the traffic moves by the move command and movr zero for all cases, except for movement to the target position.

In the latter case, set the zero current position and the target position counted so that the absolute position of the destination is the same. That is, if we were at 400 and moved to 500, then the command Zero makes the current position of 0, and the position of the destination - 100. Does not change the mode of movement that is if the motion is carried, it continues, and if the engine is in the ”hold”, the type of retention remains.

Parameters

id	an identifier of device

5.1.4.19 **device_enumeration_t XIMC_API** enumerate_devices (int probe_flags)

Enumerate all devices that looks like valid.

Parameters

in	*probe_flags*	enumerate devices flags

5.1.4.20 **result_t XIMC_API** free_enumerate_devices (**device_enumeration_t** device_enumeration)

Free memory returned by *enumerate_devices*.

Parameters

in	*device_enumeration*	opaque pointer to an enumeration device data

5.1.4.21 **result_t XIMC_API** get_accessories_settings (**device_t** id, **accessories_settings_t** * accessories_settings)

Read additional accessories information from EEPROM.

Parameters

	id	an identifier of device
out	*accessories_settings*	structure contains information about additional accessories

5.1.4.22 **result_t XIMC_API** get_analog_data (**device_t** id, **analog_data_t** * analog_data)

Read analog data structure that contains raw analog data from ADC embedded on board.

This function used for device testing and deep recalibraton by manufacturer only.

Parameters

	id	an identifier of device
out	*analog_data*	analog data coefficients

5.1.4.23 **result_t XIMC_API** get_bootloader_version (**device_t** id, unsigned int * Major, unsigned int * Minor, unsigned int * Release)

Read controller's firmware version.

Parameters

	id	an identifier of device
out	*Major*	major version
out	*Minor*	minor version
out	*Release*	release version

5.1.4.24 **result_t XIMC_API** get_brake_settings (**device_t** id, **brake_settings_t** * brake_settings)

Read settings of brake control.

Parameters

	id	an identifier of device
out	*brake_settings*	structure contains settings of brake control

5.1.4.25 **result_t XIMC_API** get_chart_data (**device_t** id, **chart_data_t** * chart_data)

Return device electrical parameters, useful for charts.

Useful function that fill structure with snapshot of controller voltages and currents.

See also

chart_data_t

Parameters

	id	an identifier of device
out	*chart_data*	structure with snapshot of controller parameters.

5.1.4.26 **result_t XIMC_API** get_control_settings (**device_t** id, **control_settings_t** * control_settings)

Read settings of motor control.

When choosing CTL_MODE = 1 switches motor control with the joystick. In this mode, the joystick to the maximum engine tends Move at MaxSpeed [i], where i = 0 if the previous use This mode is not selected another i. Buttons switch the room rate i. When CTL_MODE = 2 is switched on motor control using the Left / right. When you click on the button motor starts to move in the appropriate direction at a speed MaxSpeed [0], at the end of time Timeout

[i] motor move at a speed MaxSpeed [i+1]. at Transition from MaxSpeed [i] on MaxSpeed [i +1] to acceleration, as usual.

Parameters

	id	an identifier of device
out	*control_settings*	structure contains settings motor control by joystick or buttons left/right.

5.1.4.27 **result_t XIMC_API** get_controller_name (**device_t** id, **controller_name_t** * controller_name)

Read user controller name and flags of setting from FRAM.

Parameters

	id	an identifier of device
out	*controller_name*	structure contains previously set user controller name

5.1.4.28 **result_t XIMC_API** get_ctp_settings (**device_t** id, **ctp_settings_t** * ctp_settings)

Read settings of control position(is only used with stepper motor).

When controlling the step motor with encoder (CTP_BASE 0) it is possible to detect the loss of steps. The controller knows the number of steps per revolution (GENG :: StepsPerRev) and the encoder resolution (GFBS :: IPT). When the control (flag CTP_ENABLED), the controller stores the current position in the footsteps of SM and the current position of the encoder. Further, at each step of the position encoder is converted into steps and if the difference is greater CTPMinError, a flag STATE_CTP_ERROR. When controlling the step motor with speed sensor (CTP_BASE 1), the position is controlled by him. The active edge of input clock controller stores the current value of steps. Further, at each turn checks how many steps shifted. When a mismatch CTPMinError a flag STATE_CTP_ERROR.

Parameters

	id	an identifier of device
out	*ctp_settings*	structure contains settings of control position

5.1.4.29 **result_t XIMC_API** get_debug_read (**device_t** id, **debug_read_t** * debug_read)

Read data from firmware for debug purpose.

Its use depends on context, firmware version and previous history.

Parameters

	id	an identifier of device
out	*DebugData[128]*	Debug data.

5.1.4.30 int **XIMC_API** get_device_count (**device_enumeration_t** device_enumeration)

Get device count.

Parameters

in	*device_enumeration*	opaque pointer to an enumeration device data

5.1.4.31 **result_t XIMC_API** get_device_information (**device_t** id, **device_information_t** * device_information)

Return device information.

All fields must point to allocated string buffers with at least 10 bytes. Works with both raw or initialized device.

Parameters

	id	an identifier of device
out	*device_information*	device information Device information.

See also

get_device_information

5.1.4.32 **pchar XIMC_API** get_device_name (**device_enumeration_t** device_enumeration, int device_index)

Get device name from the device enumeration.

Returns *device_index* device name.

Parameters

in	*device_enumeration*	opaque pointer to an enumeration device data
in	*device_index*	device index

5.1.4.33 **result_t XIMC_API** get_edges_settings (**device_t** id, **edges_settings_t** * edges_settings)

Read border and limit switches settings.

See also

set_edges_settings

Parameters

	id	an identifier of device
out	*edges_settings*	edges settings, specify types of borders, motor behaviour and electrical behaviour of limit switches

5.1.4.34 **result_t XIMC_API** get_encoder_information (**device_t** id, **encoder_information_t** * encoder_information)

Read encoder information from EEPROM.

Parameters

	id	an identifier of device
out	*encoder_information*	structure contains information about encoder

5.1.4.35 **result_t XIMC_API** get_encoder_settings (**device_t** id, **encoder_settings_t** * encoder_settings)

Read encoder settings from EEPROM.

Parameters

	id	an identifier of device
out	*encoder_settings*	structure contains encoder settings

5.1.4.36 **result_t XIMC_API** get_engine_settings (**device_t** id, **engine_settings_t** * engine_settings)

Read engine settings.

This function fill structure with set of useful motor settings stored in controller's memory. These settings specify motor shaft movement algorithm, list of limitations and rated characteristics.

See also

set_engine_settings

Parameters

	id	an identifier of device
out	*engine_settings*	engine settings

5.1.4.37 **result_t XIMC_API** get_entype_settings (**device_t** id, **entype_settings_t** * entype_settings)

Return engine type and driver type.

Parameters

	id	an identifier of device
out	*EngineType*	engine type
out	*DriverType*	driver type

5.1.4.38 **result_t XIMC_API** get_enumerate_device_information (**device_enumeration_t** device_enumeration, int device_index, **device_information_t** * device_information)

Get device information from the device enumeration.

Returns *device_index* device serial number.

Parameters

in	*device_enumeration*	opaque pointer to an enumeration device data
in	*device_index*	device index
out	*device_information*	device information data

5.1.4.39 **result_t XIMC_API** get_enumerate_device_serial (**device_enumeration_t** device_enumeration, int device_index, uint32_t * serial)

Get device serial number from the device enumeration.

Returns *device_index* device serial number.

Parameters

in	*device_enumeration*	opaque pointer to an enumeration device data
in	*device_index*	device index
out	*serial*	device serial number

5.1.4.40 **result_t XIMC_API** get_extio_settings (**device_t** id, **extio_settings_t** * extio_settings)

Read EXTIO settings.

This function reads a structure with a set of EXTIO settings from controller's memory.

See also

set_extio_settings

Parameters

	id	an identifier of device
out	*extio_settings*	EXTIO settings

5.1.4.41 **result_t XIMC_API** get_feedback_settings (**device_t** id, **feedback_settings_t** * feedback_settings)

Read feedback settings.

Parameters

	id	an identifier of device
out	*IPS*	number of encoder pulses per shaft revolution. Range: 1..65535
out	*FeedbackType*	type of feedback
out	*FeedbackFlags*	flags of feedback

5.1.4.42 **result_t XIMC_API** get_firmware_version (**device_t** id, unsigned int * Major, unsigned int * Minor, unsigned int * Release)

Read controller's firmware version.

Parameters

	id	an identifier of device
out	*Major*	major version
out	*Minor*	minor version
out	*Release*	release version

5.1.4.43 **result_t XIMC_API** get_gear_information (**device_t** id, **gear_information_t** * gear_information)

Read gear information from EEPROM.

Parameters

	id	an identifier of device
out	*gear_information*	structure contains information about step gearhead

5.1.4.44 **result_t XIMC_API** get_gear_settings (**device_t** id, **gear_settings_t** * gear_settings)

Read gear settings from EEPROM.

Parameters

	id	an identifier of device
out	*gear_settings*	structure contains step gearhead settings

5.1.4.45 **result_t XIMC_API** get_hallsensor_information (**device_t** id, **hallsensor_information_t** * hallsensor_information)

Read hall sensor information from EEPROM.

Parameters

	id	an identifier of device
out	*hallsensor_information*	structure contains information about hall sensor

5.1.4.46 **result_t XIMC_API** get_hallsensor_settings (**device_t** id, **hallsensor_settings_t** * hallsensor_settings)

Read hall sensor settings from EEPROM.

Parameters

	id	an identifier of device
out	*hallsensor_settings*	structure contains hall sensor settings

5.1.4.47 **result_t XIMC_API** get_home_settings (**device_t** id, **home_settings_t** * home_settings)

Read home settings.

This function fill structure with settings of calibrating position.

See also

home_settings_t

Parameters

	id	an identifier of device
out	*home_settings*	calibrating position settings

5.1.4.48 **result_t XIMC_API** get_joystick_settings (**device_t** id, **joystick_settings_t** * joystick_settings)

Read settings of joystick.

If joystick position is outside DeadZone limits from the central position a movement with speed, defined by the joystick DeadZone edge to 100% deviation, begins. Joystick positions inside DeadZone limits correspond to zero speed (soft stop of motion) and positions beyond Low and High limits correspond MaxSpeed [i] or -MaxSpeed [i] (see command SCTL), where i = 0 by default and can be changed with left/right buttons (see command SCTL). If next speed in list is zero (both integer and microstep parts), the button press is ignored. First speed in list shouldn't be zero. The DeadZone ranges are illustrated on the following picture. !/attachments/download/5563/range25p.png! The relationship between the deviation and the rate is exponential, allowing no switching speed combine high mobility and accuracy. The following picture illustrates this: !/attachments/download/3092/ExpJoystick.png! The nonlinearity parameter is adjustable. Setting it to zero makes deviation/speed relation linear.

Parameters

	id	an identifier of device
out	*joystick_settings*	structure contains joystick settings

5.1.4.49 **result_t XIMC_API** get_motor_information (**device_t** id, **motor_information_t** * motor_information)

Read motor information from EEPROM.

Parameters

	id	an identifier of device
out	*motor_information*	structure contains motor information

5.1.4.50 **result_t XIMC_API** get_motor_settings (**device_t** id, **motor_settings_t** * motor_settings)

Read motor settings from EEPROM.

Parameters

	id	an identifier of device
out	*motor_settings*	structure contains motor settings

5.1.4.51 **result_t XIMC_API** get_move_settings (**device_t** id, **move_settings_t** * move_settings)

Read command setup movement (speed, acceleration, threshold and etc).

Parameters

	id	an identifier of device
out	*move_settings*	structure contains move settings: speed, acceleration, deceleration etc.

5.1.4.52 **result_t XIMC_API** get_pid_settings (**device_t** id, **pid_settings_t** * pid_settings)

Read PID settings.

This function fill structure with set of motor PID settings stored in controller's memory. These settings specify behaviour of PID routine for voltage. These factors are slightly different for different positioners. All boards are supplied with standart set of PID setting on controller's flash memory.

See also

set_pid_settings

Parameters

	id	an identifier of device
out	*pid_settings*	pid settings

5.1.4.53 **result_t XIMC_API** get_position (**device_t** id, **get_position_t** * the_get_position)

Reads the value position in steps and micro for stepper motor and encoder steps all engines.

Parameters

	id	an identifier of device
out	*position*	structure contains move settings: speed, acceleration, deceleration etc.

5.1.4.54 **result_t XIMC_API** get_power_settings (**device_t** id, **power_settings_t** * power_settings)

Read settings of step motor power control.

Used with stepper motor only.

Parameters

	id	an identifier of device
out	*power_settings*	structure contains settings of step motor power control

5.1.4.55 **result_t XIMC_API** get_secure_settings (**device_t** id, **secure_settings_t** * secure_settings)

Read protection settings.

Parameters

	id	an identifier of device
out	*secure_settings*	critical parameter settings to protect the hardware

See also

status_t::flags

5.1.4.56 **result_t XIMC_API** get_serial_number (**device_t** id, unsigned int * SerialNumber)

Read device serial number.

Parameters

	id	an identifier of device
out	*serial*	serial number

5.1.4.57 **result_t XIMC_API** get_stage_information (**device_t** id, **stage_information_t** * stage_information)

Read stage information from EEPROM.

Parameters

	id	an identifier of device
out	*stage_information*	structure contains stage information

5.1.4.58 **result_t XIMC_API** get_stage_name (**device_t** id, **stage_name_t** * stage_name)

Read user stage name from EEPROM.

Parameters

	id	an identifier of device
out	*stage_name*	structure contains previously set user stage name

5.1.4.59 **result_t XIMC_API** get_stage_settings (**device_t** id, **stage_settings_t** * stage_settings)

Read stage settings from EEPROM.

Parameters

	id	an identifier of device
out	*stage_settings*	structure contains stage settings

5.1.4.60 **result_t XIMC_API** get_status (**device_t** id, **status_t** * status)

Return device state.

Parameters

	id	an identifier of device
out	*status*	structure with snapshot of controller status Device state. Useful structure that contains current controller status, including speed, position and boolean flags.

See also

get_status

5.1.4.61 **result_t XIMC_API** get_status_calb (**device_t** id, **status_calb_t** * status, const **calibration_t** * calibration)

TODO document me Useful structure that contains current controller status, including speed, position and boolean flags.

See also

get_status

5.1.4.62 **result_t XIMC_API** get_sync_in_settings (**device_t** id, **sync_in_settings_t** * sync_in_settings)

Read input synchronization settings.

This function fill structure with set of input synchronization settings, modes, periods and flags, that specify behaviour of input synchronization. All boards are supplied with standart set of these settings.

See also

set_sync_in_settings

Parameters

	id	an identifier of device
out	*sync_in_settings*	synchronization settings

5.1.4.63 **result_t XIMC_API** get_sync_out_settings (**device_t** id, **sync_out_settings_t** * sync_out_settings)

Read output synchronization settings.

This function fill structure with set of output synchronization settings, modes, periods and flags, that specify behaviour of output synchronization. All boards are supplied with standart set of these settings.

See also

set_sync_out_settings

Parameters

	id	an identifier of device
out	*sync_out_settings*	synchronization settings

5.1.4.64 **result_t XIMC_API** get_uart_settings (**device_t** id, **uart_settings_t** * uart_settings)

Read UART settings.

This function fill structure with UART settings.

See also

uart_settings_t

Parameters

	Speed	UART speed
out	*uart_settings*	UART settings

5.1.4.65 **result_t XIMC_API** goto_firmware (**device_t** id, uint8_t * ret)

TODO Check for firmware on device.

Parameters

	id	an identifier of device
out	*ret*	non-zero if firmware existed

5.1.4.66 **result_t XIMC_API** has_firmware (const char * name, uint8_t * ret)

Check for firmware on device.

Parameters

	name	a name of device
out	*ret*	non-zero if firmware existed

5.1.4.67 void **XIMC_API** logging_callback_stderr_narrow (int loglevel, const wchar_t * message)

Simple callback for logging to stderr in narrow (single byte) chars.

Parameters

loglevel	a loglevel
message	a message

5.1.4.68 void **XIMC_API** logging_callback_stderr_wide (int loglevel, const wchar_t * message)

Simple callback for logging to stderr in wide chars.

Parameters

loglevel	a loglevel
message	a message

5.1.4.69 void **XIMC_API** msec_sleep (unsigned int msec)

Sleeps for a specified amount of time.

Parameters

msec	time in milliseconds

5.1.4.70 **device_t XIMC_API** open_device (const char * name)

Open a device with OS name *name* and return identifier of the device which can be used in calls.

Parameters

in	*name*	- a device name - e.g. COM3 or /dev/tty.s123

5.1.4.71 **result_t XIMC_API** probe_device (const char * name)

Check if a device with OS name *name* is XIMC device.

Be carefuly with this call because it sends some data to the device.

Parameters

in	*name*	- a device name

5.1.4.72 **result_t XIMC_API** service_command_updf (**device_t** id)

Command puts the controller to update the firmware.

After receiving this command, the firmware board sets a flag (for loader), sends echo reply and restarts the controller.

5.1.4.73 **result_t XIMC_API** set_accessories_settings (**device_t** id, const **accessories_settings_t** * accessories_settings)

Set additional accessories information to EEPROM.

Can be used by manufacturer only.

Parameters

	id	an identifier of device
in	*accessories_settings*	structure contains information about additional accessories

5.1.4.74 **result_t XIMC_API** set_add_sync_in_action (**device_t** id, const **add_sync_in_action_t** * add_sync_in_action)

This command adds one element of the FIFO commands that are executed when input clock pulse.

Each pulse synchronization or perform that action, which is described in SSNI, if the buffer is empty, or the oldest loaded into the buffer action to temporarily replace the speed and coordinate in SSNI. In the latter case this action is erased from the buffer. The number of remaining empty buffer elements can be found in the structure of GETS.

Parameters

	id	an identifier of device

5.1.4.75 **result_t XIMC_API** set_brake_settings (**device_t** id, const **brake_settings_t** * brake_settings)

Set settings of brake control.

Parameters

	id	an identifier of device
in	*brake_settings*	structure contains settings of brake control

5.1.4.76 **result_t XIMC_API** set_control_settings (**device_t** id, const **control_settings_t** * control_settings)

Set settings of motor control.

When choosing CTL_MODE = 1 switches motor control with the joystick. In this mode, the joystick to the maximum engine tends Move at MaxSpeed [i], where i = 0 if the previous use This mode is not selected another i. Buttons switch the room rate i. When CTL_MODE = 2 is switched on motor control using the Left / right. When you click on the button motor starts to move in the appropriate direction at a speed MaxSpeed [0], at the end of time Timeout [i] motor move at a speed MaxSpeed [i+1]. at Transition from MaxSpeed [i] on MaxSpeed [i +1] to acceleration, as usual.

Parameters

	id	an identifier of device
in	*control_settings*	structure contains settings motor control by joystick or buttons left/right.

5.1.4.77 **result_t XIMC_API** set_controller_name (**device_t** id, const **controller_name_t** * controller_name)

Write user controller name and flags of setting from FRAM.

Parameters

	id	an identifier of device
in	*controller_name*	structure contains previously set user controller name

5.1.4.78 **result_t XIMC_API** set_ctp_settings (**device_t** id, const **ctp_settings_t** * ctp_settings)

Set settings of control position(is only used with stepper motor).

When controlling the step motor with encoder (CTP_BASE 0) it is possible to detect the loss of steps. The controller knows the number of steps per revolution (GENG :: StepsPerRev) and the encoder resolution (GFBS :: IPT). When the control (flag CTP_ENABLED), the controller stores the current position in the footsteps of SM and the current position of the encoder. Further, at each step of the position encoder is converted into steps and if the difference is greater CTPMinError, a flag STATE_CTP_ERROR. When controlling the step motor with speed sensor (CTP_BASE 1), the position is controlled by him. The active edge of input clock controller stores the current value of steps. Further, at each turn checks how many steps shifted. When a mismatch CTPMinError a flag STATE_CTP_ERROR.

Parameters

	id	an identifier of device
in	*ctp_settings*	structure contains settings of control position

5.1.4.79 **result_t XIMC_API** set_edges_settings (**device_t** id, const **edges_settings_t** * edges_settings)

Set border and limit switches settings.

See also

set_edges_settings

Parameters

	id	an identifier of device
in	*edges_settings*	edges settings, specify types of borders, motor behaviour and electrical behaviour of limit switches

5.1.4.80 **result_t XIMC_API** set_encoder_information (**device_t** id, const **encoder_information_t** * encoder_information)

Set encoder information to EEPROM.

Can be used by manufacturer only.

Parameters

	id	an identifier of device
in	*encoder_information*	structure contains information about encoder

5.1.4.81 **result_t XIMC_API** set_encoder_settings (**device_t** id, const **encoder_settings_t** * encoder_settings)

Set encoder settings to EEPROM.

Can be used by manufacturer only.

Parameters

	id	an identifier of device
in	*encoder_settings*	structure contains encoder settings

5.1.4.82 **result_t XIMC_API** set_engine_settings (**device_t** id, const **engine_settings_t** * engine_settings)

Set engine settings.

This function send structure with set of engine settings to controller's memory. These settings specify motor shaft movement algorithm, list of limitations and rated characteristics. Use it when you change motor, encoder, positioner etc. Please note that wrong engine settings lead to device malfunction, can lead to irreversible damage of board.

See also

get_engine_settings

Parameters

	id	an identifier of device
in	*engine_settings*	engine settings

5.1.4.83 **result_t XIMC_API** set_entype_settings (**device_t** id, const **entype_settings_t** * entype_settings)

Set engine type and driver type.

Parameters

	id	an identifier of device
in	*EngineType*	engine type
in	*DriverType*	driver type

5.1.4.84 **result_t XIMC_API** set_extio_settings (**device_t** id, const **extio_settings_t** * extio_settings)

Set EXTIO settings.

This function writes a structure with a set of EXTIO settings to controller's memory. By default input event are signalled through rising front and output states are signalled by high logic state.

See also

get_extio_settings

Parameters

	id	an identifier of device
in	*extio_settings*	EXTIO settings

5.1.4.85 **result_t XIMC_API** set_feedback_settings (**device_t** id, const **feedback_settings_t** * feedback_settings)

Set feedback settings.

Parameters

	id	an identifier of device
in	*IPS*	number of encoder pulses per shaft revolution. Range: 1..65535
in	*FeedbackType*	type of feedback
in	*FeedbackFlags*	flags of feedback

5.1.4.86 **result_t XIMC_API** set_gear_information (**device_t** id, const **gear_information_t** * gear_information)

Set gear information to EEPROM.

Can be used by manufacturer only.

Parameters

	id	an identifier of device
in	*gear_information*	structure contains information about step gearhead

5.1.4.87 **result_t XIMC_API** set_gear_settings (**device_t** id, const **gear_settings_t** * gear_settings)

Set gear settings to EEPROM.

Can be used by manufacturer only.

Parameters

	id	an identifier of device
in	*gear_settings*	structure contains step gearhead settings

5.1.4.88 **result_t XIMC_API** set_hallsensor_information (**device_t** id, const **hallsensor_information_t** * hallsensor_information)

Set hall sensor information to EEPROM.

Can be used by manufacturer only.

Parameters

	id	an identifier of device
in	*hallsensor_information*	structure contains information about hall sensor

5.1.4.89 **result_t XIMC_API** set_hallsensor_settings (**device_t** id, const **hallsensor_settings_t** * hallsensor_settings)

Set hall sensor settings to EEPROM.

Can be used by manufacturer only.

Parameters

	id	an identifier of device
in	*hallsensor_settings*	structure contains hall sensor settings

5.1.4.90 **result_t XIMC_API** set_home_settings (**device_t** id, const **home_settings_t** * home_settings)

Set home settings.

This function send structure with calibrating position settings to controller's memory.

See also

home_settings_t

Parameters

	id	an identifier of device
in	*home_settings*	calibrating position settings

5.1.4.91 **result_t XIMC_API** set_joystick_settings (**device_t** id, const **joystick_settings_t** * joystick_settings)

Set settings of joystick.

If joystick position is outside DeadZone limits from the central position a movement with speed, defined by the joystick DeadZone edge to 100% deviation, begins. Joystick positions inside DeadZone limits correspond to zero speed (soft stop of motion) and positions beyond Low and High limits correspond MaxSpeed [i] or -MaxSpeed [i] (see command SCTL), where i = 0 by default and can be changed with left/right buttons (see command SCTL). If next speed in list is zero (both integer and microstep parts), the button press is ignored. First speed in list shouldn't be zero. The DeadZone ranges are illustrated on the following picture. !/attachments/download/5563/range25p.png! The relationship between the deviation and the rate is exponential, allowing no switching speed combine high mobility and accuracy. The following picture illustrates this: !/attachments/download/3092/ExpJoystick.png! The nonlinearity parameter is adjustable. Setting it to zero makes deviation/speed relation linear.

Parameters

	id	an identifier of device
in	*joystick_settings*	structure contains joystick settings

5.1.4.92 void **XIMC_API** set_logging_callback (**logging_callback_t** logging_callback)

Sets a logging callback.

Call resets a callback to default (stderr, syslog) if NULL passed.

Parameters

logging_callback	a callback for log messages

5.1.4.93 **result_t XIMC_API** set_motor_information (**device_t** id, const **motor_information_t** * motor_information)

Set motor information to EEPROM.

Can be used by manufacturer only.

Parameters

	id	an identifier of device
in	*motor_information*	structure contains motor information

5.1.4.94 **result_t XIMC_API** set_motor_settings (**device_t** id, const **motor_settings_t** * motor_settings)

Set motor settings to EEPROM.

Can be used by manufacturer only.

Parameters

	id	an identifier of device
in	*motor_settings*	structure contains motor information

5.1.4.95 **result_t XIMC_API** set_move_settings (**device_t** id, const **move_settings_t** * move_settings)

Set command setup movement (speed, acceleration, threshold and etc).

Parameters

	id	an identifier of device
in	*move_settings*	structure contains move settings: speed, acceleration, deceleration etc.

5.1.4.96 **result_t XIMC_API** set_pid_settings (**device_t** id, const **pid_settings_t** * pid_settings)

Set PID settings.

This function send structure with set of PID factors to controller's memory. These settings specify behaviour of PID routine for voltage. These factors are slightly different for different positioners. All boards are supplied with standart set of PID setting on controller's flash memory. Please use it for loading new PID settings when you change positioner. Please note that wrong PID settings lead to device malfunction.

See also

get_pid_settings

Parameters

	id	an identifier of device
in	*pid_settings*	pid settings

5.1.4.97 **result_t XIMC_API** set_position (**device_t** id, const **set_position_t** * the_set_position)

Sets any position value in steps and micro for stepper motor and encoder steps of all engines.

It means, that changing main indicator of position.

Parameters

	id	an identifier of device
out	*position*	structure contains move settings: speed, acceleration, deceleration etc.

5.1.4.98 **result_t XIMC_API** set_power_settings (**device_t** id, const **power_settings_t** * power_settings)

Set settings of step motor power control.

Used with stepper motor only.

Parameters

	id	an identifier of device
in	*power_settings*	structure contains settings of step motor power control

5.1.4.99 **result_t XIMC_API** set_secure_settings (**device_t** id, const **secure_settings_t** * secure_settings)

Set protection settings.

Parameters

id	an identifier of device
secure_settings	structure with secure data

See also

status_t::flags

5.1.4.100 **result_t XIMC_API** set_serial_number (**device_t** id, const **serial_number_t** * serial_number)

Write device serial number to controller's flash memory.

Along with the new serial number a "Key" is transmitted. The SN is changed and saved when keys match. Can be used by manufacturer only.

Parameters

	id	an identifier of device
in	*serial*	number structure contains new serial number and secret key.

5.1.4.101 **result_t XIMC_API** set_stage_information (**device_t** id, const **stage_information_t** * stage_information)

Set stage information to EEPROM.

Can be used by manufacturer only.

Parameters

	id	an identifier of device
in	*stage_information*	structure contains stage information

5.1.4.102 **result_t XIMC_API** set_stage_name (**device_t** id, const **stage_name_t** * stage_name)

Write user stage name from EEPROM.

Parameters

	id	an identifier of device
in	*stage_name*	structure contains previously set user stage name

5.1.4.103 **result_t XIMC_API** set_stage_settings (**device_t** id, const **stage_settings_t** * stage_settings)

Set stage settings to EEPROM.

Can be used by manufacturer only

Parameters

	id	an identifier of device
in	*stage_settings*	structure contains stage settings

5.1.4.104 **result_t XIMC_API** set_sync_in_settings (**device_t** id, const **sync_in_settings_t** * sync_in_settings)

Set input synchronization settings.

This function send structure with set of input synchronization settings, that specify behaviour of input synchronization, to controller's memory. All boards are supplied with standart set of these settings.

See also

get_sync_in_settings

Parameters

	id	an identifier of device
in	*sync_in_settings*	synchronization settings

5.1.4.105 **result_t XIMC_API** set_sync_out_settings (**device_t** id, const **sync_out_settings_t** * sync_out_settings)

Set output synchronization settings.

This function send structure with set of output synchronization settings, that specify behaviour of output synchronization, to controller's memory. All boards are supplied with standart set of these settings.

See also

get_sync_out_settings

Parameters

	id	an identifier of device
in	*sync_out_-settings*	synchronization settings

5.1.4.106 result_t XIMC_API set_uart_settings (device_t id, const uart_settings_t * uart_settings)

Set UART settings.

This function send structure with UART settings to controller's memory.

See also

uart_settings_t

Parameters

	Speed	UART speed
in	*uart_settings*	UART settings

5.1.4.107 result_t XIMC_API write_key (const char * name, uint8_t * key)

Write controller key.

TODO fix docs Can be used by manufacturer only

Parameters

	name	a name of device
in	*key*	protection key. Range: 0..4294967295

5.1.4.108 result_t XIMC_API ximc_fix_usbser_sys (const char * device_name)

Fix for errors in Windows USB driver stack.

Resets a driver if a device exists and in a hanged state.

5.1.4.109 void XIMC_API ximc_version (char * version)

Returns a library version.

Parameters

version	a buffer to hold a version string, 32 bytes is enough
